

# Massachusetts School Building Authority

## Needs Survey Report

Prepared by DeJONG  
April 2006

## Needs Survey Report

### Acknowledgements

The Massachusetts School Building Authority would like to acknowledge the efforts of the organizations and individuals who assisted in making this survey possible. With the guidance and support of the individuals on the following pages, the Needs Survey, required by the Authority's enabling legislation, has been a success. The information collected will provide a baseline understanding of the general conditions of school facilities within the Commonwealth.

The Massachusetts School Building Authority would like to extend its appreciation to the cities, towns and regional school districts and the superintendents, principals, and staff of all of the school districts in the Commonwealth who opened their doors to data collectors and provided invaluable information regarding their school facilities. The Authority would like to specifically thank the Massachusetts Association of School Superintendents, the Massachusetts Association of School Committees, and the Massachusetts Association of School Business Officials for their insight and participation.

The Authority extends its gratitude to State Treasurer Timothy P. Cahill, Chairman of the Authority's Board of Directors, and all of the Authority's Board members for their encouragement and leadership in this undertaking.

#### **Massachusetts School Building Authority Board of Directors**

*Timothy P. Cahill, State Treasurer, Chair*

*Jeffrey Wulfson, designee of the Commissioner of Education*

*Bob Costrell, designee of the Secretary of Administration and Finance*

*Richard Bertman, Founding Principal, CBT Architects*

*Terry Kwan, former teacher and Brookline School Committee member*

*Mary Grassa O'Neill, Director, Principal's Center at Harvard Graduate School of Education*

*Lisa Turnbaugh, President, LRT Solutions Inc.*

#### **Staff**

*Katherine P. Craven, Executive Director*

*Andrew Cherullo, Chief Financial Officer & Chief Operating Officer*

*Susan Flanagan-Cahill, General Counsel*

*Enrique Zuniga, Director of Project & Construction Management*

*Joseph Buckley, P.E., Director of Architecture & Engineering Oversight*

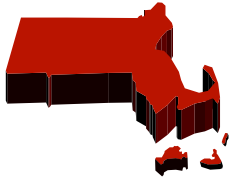

*Rick Keyes, Chief Information Officer*

*Carrie Sullivan, Public Information Officer*

*Tracy Holt, Chief of Staff*

*Christine Lynch, Director of School Building Service for the Department of Education*

## Needs Survey Report

The Authority worked closely with three separate consulting firms, each having a particular specialty necessary to create the team of experts to conduct and successfully complete the Needs Survey.

## DEJONG

William S. DeJong, PhD, REFP – CEO  
Frank Locker, PhD, AIA, REFP – Vice President  
Carolyn Staskiewicz, REFP – Project Director

## Needs Survey Report

### Executive Summary

The Needs Survey Final Report is the culmination of more than eight months of work commissioned by the Massachusetts School Building Authority to gather statewide baseline data about the general conditions of locally-owned public school facilities throughout the Commonwealth. The data collected is a result of the observations of teams of educators and engineers whose task was to utilize a standard survey to ascertain the general condition of each school in the Commonwealth. Data collectors visited every superintendent in every school district to receive an inventory of school committee-controlled school properties and then visited every one of those school facilities to gather this important baseline data. Baseline data about the general condition of Massachusetts school facilities has never existed in the breadth and scope which has been gathered herein. This baseline data will be one of many important tools that the Board of the Authority will use when considering new applications for funding when a reformed School Building Grant program begins in fiscal year 2008.

#### The following are key findings of the Needs Survey:

- 1. The condition of the 1,817 Massachusetts schoolhouses is generally good.** The general baseline data gathered during the Needs Survey was used to rate each school on a 1 to 4 basis.
  - Over 76% of Massachusetts schools received a rating of 1 or 2, meaning that they are generally in good condition, with few building systems that may need attention.
  - Less than 3%, or only 62, of Massachusetts schools received a rating of 4, meaning that the building may need substantial work.
  - Of the 62 schools that received a rating of 4, 11 are on the Waiting List and are due to receive funding from the Authority in the near future.
  - There was little correlation between the relative wealth of a school district and the general condition of the school buildings within that district.
- 2. Massachusetts has expended a substantial amount on schoolhouse capital facilities over the past 60 years.** In 2005, the Commonwealth was paying an average of 72% of local capital school construction or renovation costs. The Authority is currently making approximately \$11 billion in payments on local school projects, with municipalities paying approximately \$4 billion to match Authority funds.
  - Of the 1,817 schools in the Commonwealth, 1,156, or 63%, are currently being reimbursed for construction or renovation projects undertaken between 1986 and 2005.
  - There has been a fairly consistent effort in each decade to build or renovate schoolhouse space. From 1950 to 1980, an average of 35 million square feet of new or renovated school building space was completed *in each decade* in the Commonwealth to accommodate rising populations.
- 3. A School Building Boom occurred between 2000 and 2005 even though statewide enrollment has been declining.** Between 2000 and 2005, the amount of school facility square footage that was built new or renovated far surpassed the amount of square footage built new or renovated in any previous decade.
  - Between 2000 and 2005, 46 million square feet of building space was constructed or renovated, and this does not include projects on the Waiting List that have not started construction or are incomplete.
  - This 46 million square feet represents over 10 million more square feet of school facility construction and renovation in a six-year period than in any previous decade.
  - There has been a significant increase in demand for school building funding since 2000 even though statewide school enrollment has been declining and is projected to continue to decline in the next ten years.
- 4. Almost one-half of the current school facility square footage is new or recently renovated.** More than 48% of Massachusetts school square footage either has been built new or renovated in the last 15 years.

## Needs Survey Report

5. **There is very little temporary space in Massachusetts.** Massachusetts communities have been very responsive when faced with enrollment growth by building permanent facility space.
- Of the 171 million square feet of school facility space in the Commonwealth, less than 959,000 square feet is temporary school facility space.
  - This indicates that there is little evidence of widespread overcrowding and that most of the space needs for Massachusetts schools are being met through the use of permanent school facility space.
6. **Massachusetts schools have been built 32% to 39% larger, on average, than the maximum gross square footage space requirements per student in the Department of Education regulations.** The Needs Survey has revealed that the average school in Massachusetts is significantly larger than the gross square footage stated in the former DOE regulations. Most Massachusetts schools significantly exceed the DOE maximum regulation square footages.

Gross Square Footage Comparison			
School Type	DOE Space Standards	As Reported from Needs Survey	% Difference
Elementary School	115 gsf/student	154 gsf/student	+ 32%
Middle School	135 gsf/student	186 gsf/student	+ 33%
High School	155 gsf/student	215 gsf/student	+ 39%

7. **Beginning in fiscal year 2008, the reformed School Building Grant program should be able to provide sufficient resources to meet statewide school capital facility need as determined by the Board of the Authority.** Grants funded under the new program are limited to an amount not to exceed \$500 million in fiscal year 2008, with the limit growing at 4.5% annually thereafter. If sales tax growth remains robust, this translates into approximately \$2.7 billion dollars of potential funding from the Authority for school construction and renovation projects over the next 5 years. Given the generally good condition of Massachusetts schools and the lack of statewide enrollment growth, the pace of school renovation and construction should be markedly less than the recent history of the program.

## Needs Survey Report

### Introduction

#### Background

The Massachusetts School Building Authority (the "Authority") was created by Chapter 208 of the Acts of 2004 to effectively plan and manage a financially sustainable school building construction and renovation grant program. The Authority is an independent public authority not subject to the supervision and control of any other executive office, department, commission, board, bureau, agency or political subdivision of the Commonwealth. State Treasurer Timothy P. Cahill serves as chairman of the Board of Directors of the Authority. Also serving on the Board of Directors are the Secretary of Administration and Finance or his designee, the Commissioner of Education or his designee and four additional members appointed by the State Treasurer, two of whom are required to have practical experience in educational facilities planning, school building construction or architecture and school design, and two of whom are in the field of education with demonstrated knowledge of the Commonwealth's curriculum frameworks and other relevant federal and state educational standards. Prior to the creation of the Authority, the Department of Education administered and managed the former school building assistance program.

The Authority is funded by a dedicated revenue stream of one cent of the Commonwealth's 5 cent sales tax (excluding meals and certain other portions). These revenues are dedicated to paying the estimated \$11 billion for the Commonwealth's share of grants for 1,156 projects approved under the former program and for grants authorized and approved by the Authority under the new program. After July 1, 2007, the Authority is authorized to accept applications from cities, towns and regional school districts for new construction and renovation projects. Funding for the Authority's share of grants for the new program is limited to an amount not to exceed \$500 million in fiscal year 2008, with the limit growing at 4.5% annually thereafter.

#### The Former Program

The Legislature had created a temporary school building assistance program in 1948 to encourage municipalities to regionalize local educational facilities to accommodate the post-World War II baby boom population. Originally set to expire in 1951, the school building assistance program grew in popularity and reimbursements ranged from 20% to 60% until the 1970s, when 90% reimbursements were introduced for certain communities as a desegregation incentive. During the 1980s, the passage of a statewide local property tax limitation initiative petition, "Proposition 2 ½", limited the ability of cities and towns to raise local funds. By the late 1990s, the demand by cities and towns for funding for school construction and renovation projects had outpaced the then current funding and management structure. In 2000, the "temporary" school building assistance program was finally codified in General Law with the enactment of Chapter 70B of the General Laws.

However, the program had become financially unsustainable, with many communities waiting for years to receive their first reimbursement from the state. In 2004, State Treasurer Timothy P. Cahill proposed the dedication of one cent of the statewide 5 cent sales tax as a permanent revenue stream for a reformed school building grant program. The Legislature passed and Governor Mitt Romney signed Chapter 208 of the Acts of 2004. This landmark legislation eliminated the former school building assistance program and created the Authority to administer and fund a new program for grants to cities, towns and regional school districts for school construction and renovation projects. The Authority will adopt appropriate rules and regulations necessary to administer the School Building Grant Program and approve grants to reimburse school districts for the Authority's share of school projects.

#### The Reform

The reform law mandates that the Authority gather information about the needs of locally-owned school facilities and create a budgeted long-term capital plan under which it may provide non-entitlement grants to cities, towns and regional school districts while balancing the best interests of the Commonwealth. Section 17 of Chapter 70B of the General Laws, as amended by chapters 208 and 210 of the Acts of 2004, provides in subsections (b), (c) and (d):

## Needs Survey Report

- (b) The Authority shall also conduct periodic surveys of the cities, towns and regional school districts to determine the need for new school facility construction to meet demand.
- (c) The Authority shall develop a long-term capital plan in accordance with needs and funding projected to be available in the trust under this chapter for purposes of planning and guiding the policies of the authority.
- (d) The capital plans, needs surveys and reports of the Authority shall not give rise to any claim, legal or moral, or enforceable right in any party to benefits or funds from the trust or from other sources.

Chapter 70B requires that the new school building grant program be based on how each proposed project fits within the statewide spectrum of need and on available funding under the statutory funding limit.

### The Needs Survey

The Needs Survey is a data collection survey to gather baseline information and data regarding the general condition of school facilities. This survey is based on the observations of trained data collectors and is not a comprehensive architectural and engineering assessment. It will provide the Authority with baseline data about school building conditions in a standard format, which will allow the Authority to begin a preliminary comparative analysis of school building conditions throughout Massachusetts. The major components of the Needs Survey include:

- Confirmation of basic information such as school names, locations, addresses, and square footage
- A status update of projects that are currently on the Waiting List
- An indication of the types and scopes of potential future projects for which districts may want to apply for funding under the new program
- A survey of specialized educational spaces within existing school facilities
- A general assessment of specific site and major building systems and an overall building score

When the Authority was created, there was no standard, centralized data on the Commonwealth's school facilities and the current conditions of those facilities. During the 60-year history of the school building assistance program in the Commonwealth, no survey of this magnitude was ever undertaken statewide. In addition, to be consistent with the Authority's statutory mandates in Chapter 70B and the requirements to develop a new program for school construction and renovation, completion of the Needs Survey was necessary to provide the Authority with:

- Standardized baseline facility and condition information about each of the locally-owned school facilities in the Commonwealth
- Baseline information that, together with other data and information, will help the Board of the Authority to review applications and make future funding decisions
- A framework for further investigation should the Authority need to commission a comprehensive architectural and engineering assessment of an applicant's facility
- Data that will assist in the development and maintenance of the Authority's long term capital plan
- An overall context of the conditions of school facilities and how needs of individual districts fit within the statewide spectrum of need

The Authority procured the services of DeJONG, a nationally recognized educational planning firm, to assist in the planning and execution of a statewide Needs Survey. The DeJONG team has orchestrated similar data gathering efforts in other states and had developed survey tools and methodology to effectively gather and present baseline school facility information in a consistent manner.

## Needs Survey Report

Teams of data collectors visited every school facility in the Commonwealth and gathered this baseline information. The data collectors were selected based on a combination of educational and facility assessment backgrounds. The Authority also solicited and obtained valuable participation from the Massachusetts Association of School Superintendents, the Massachusetts Association of School Committees, the Massachusetts Association of School Business Officials and the New England School Development Council, from whose ranks many of the data collectors were obtained. The Massachusetts Department of Education provided updated enrollment information for use in the Needs Survey.

### The New MSBA School Building Project Grant Application Process

After July 1, 2007, the Authority is authorized to accept grant applications for school construction and renovation projects and to review those applications based on the fiscal and educational requirements of Chapter 70B of the General Laws and new regulations that are currently under development.

A critical element of the new application process for any city, town or regional school district interested in applying for funds after July 1, 2007 is to provide the Authority with a Statement of Interest Form that clearly and concisely identifies the local perspective about deficiencies in a school facility. Filing this Form will be a prerequisite to filing an application with the Authority. Based on the Needs Survey data and the Statement of Interest Form, the Authority may determine that a comprehensive school facility assessment may be necessary. If the Authority determines that a comprehensive assessment is necessary, the Authority will procure professional assessing teams composed of engineers, architects and other building professionals to conduct an assessment. This comprehensive assessment may not be done on all school facilities.

A critical component of the application review process will be to consider applications based upon criteria set forth in section 8 of Chapter 70B of the General Laws as listed below:

1. Replacement or renovation of a building which is structurally unsound or otherwise in a condition seriously jeopardizing the health and safety of school children, where no alternative exists, as determined in the judgment of the Authority;
2. Elimination of existing severe overcrowding, as determined in the judgment of the Authority;
3. Prevention of loss of accreditation, as determined in the judgment of the Authority;
4. Prevention of severe overcrowding expected to result from increased enrollments, which must be substantiated, as determined in the judgment of the Authority;
5. Replacement, renovation or modernization of the heating system in any schoolhouse to increase energy conservation and decrease energy related costs in the schoolhouse, as determined in the judgment of the Authority;
6. Short term enrollment growth, as determined in the judgment of the Authority;
7. Replacement or addition of obsolete buildings in order to provide a full range of programs consistent with state and approved local requirements, as determined in the judgment of the Authority; and
8. Transition from court-ordered and approved racial balance school districts to walk-to, so-called, or other school districts, as determined in the judgment of the Authority.

The new application process will require that the Authority and the city, town or regional school district agree first on the problem necessitating a solution and then work collaboratively on creating a solution to the problem. As a condition for funding, the Authority will require a city, town or regional school district to work in conjunction with the Authority throughout all stages of a project, beginning with the identification of deficiencies in school facilities.

In addition, section 6 of chapter 70B establishes the parameters under which the Authority must consider approval of school projects for the new grant program. According to statute, the Authority must make a finding that the approved school project fits within both the available funding and the Authority's long-term capital plan, and that it conforms to the priorities established in section 8, as detailed above, the construction standards and procedures under chapter 70B, other state laws, the newly established rules and regulations of the Authority, and the following criteria:

## Needs Survey Report

1. The school project is in the best interests of the Commonwealth and the eligible applicant, with respect to its site, type of construction, sufficiency of accommodations, open space preservation, urban development, urban sprawl, energy efficiency, and otherwise.
2. The school project is necessary to meet educational standards of the curriculum frameworks established by the Board of Education pursuant to section 1E of chapter 69 for anticipated enrollment levels.
3. The school project has a value over its useful life commensurate with the lifecycle cost of building, operating, and maintaining the project.
4. The school project is not at a school that has been the site of an approved school project pursuant to this chapter or to chapter 645 of the acts of 1948 within the 10 years prior to the project application date, or the approved school project is unrelated to such previously approved project in the same school.
5. The school project is within the capacity of the authority to finance within revenues projected to be available to the trust, established pursuant to section 35BB of chapter 10.
6. The Commissioner of Education has certified that adequate provisions have been made in the school project for children with disabilities, as defined in section 1 of chapter 71B, and, in the case of elementary facilities, that adequate provisions consistent with local policy have been made for all-day kindergarten, pre-kindergarten classes and for extended day programs; provided, however, that no district shall be required to adopt the classes or programs.

The statute which created the Authority places tremendous emphasis on planning, due diligence, and the prioritization of scarce Authority resources first on the school building projects which demonstrate the most need. The Needs Survey results are an important, and sometimes surprising, look at the current condition of school facilities and the potential universe of projects that may meet the statutory priorities for funding from the Massachusetts School Building Authority.

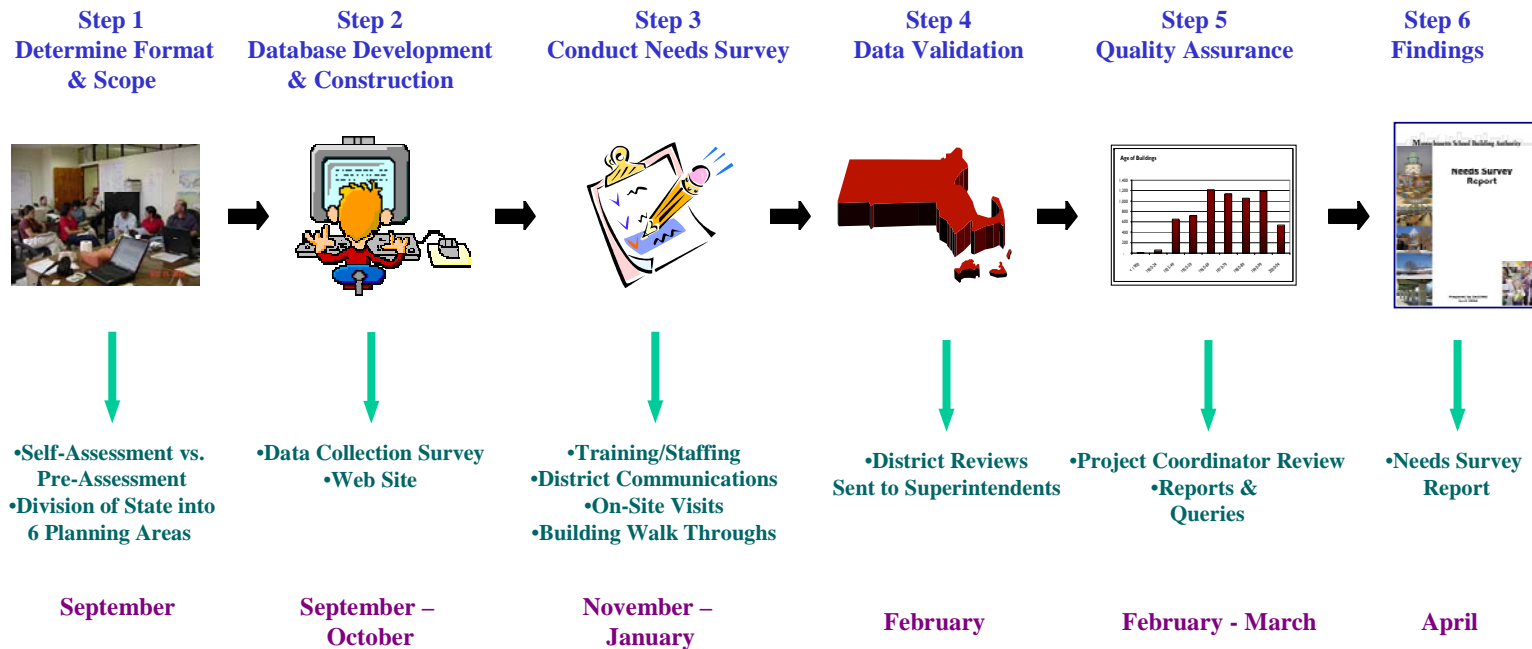

# Needs Survey Report

## Needs Survey Process & Methodology

The Needs Survey required eight months to plan and execute. The timeline below demonstrates the critical indicators and procedures used to complete the process. Further narrative and details are provided within the following pages.

### *Needs Survey*

## Needs Survey Report

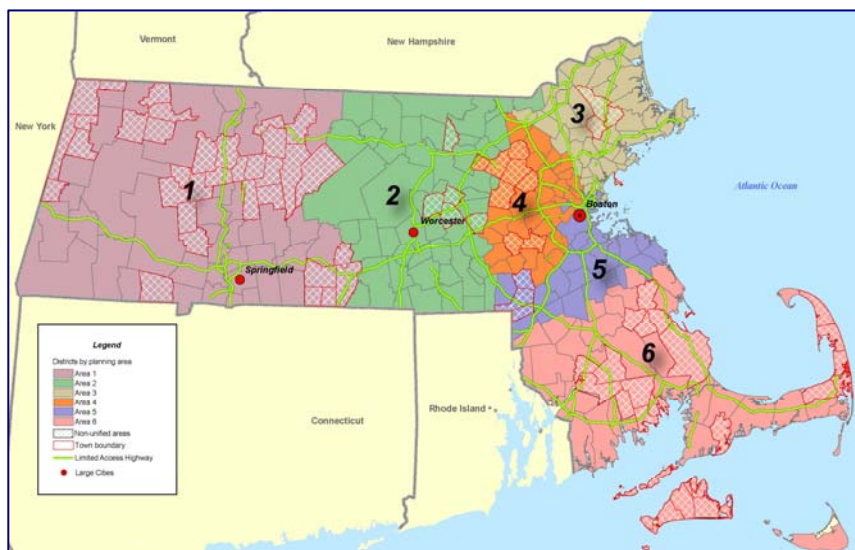

As with any project of this magnitude, the process begins with planning and understanding the scope, tasks, and deliverables associated with the massive effort of statewide data collection. The primary goal of the Needs Survey was to collect, document and analyze baseline facility-related data for the 1,817 locally-owned school facilities in the Commonwealth of Massachusetts. Other project goals included:

- Identifying the overall context of the conditions of school facilities and how the needs of individual districts fit within the statewide spectrum of need.
- Obtaining verification of data by superintendents and local school officials.
- Confirming basic information such as school names, locations, addresses, and square footage.
- Updating the status of projects on the Waiting List and obtaining an indication of the types and scopes of potential future projects for which school districts may want to apply for funding under the new program.
- Collecting data that will assist in the development and maintenance of the Authority's long-term capital plan.

To this end, the following steps were taken to complete the Needs Survey.

### Step 1 Determine Format and Scope

- There are many different methods of data collection. The options considered included (1) a self-reported survey, (2) a survey based on the observations of trained data collectors with input and verification from superintendents and local school officials, and (3) a comprehensive architectural and engineering assessment and analysis by a team of trained professionals. Self-reported surveys generally lack consistency and standardization of answers, and fall short of a 100% response rate. When the Authority was created, there was no standard, centralized data on the number of locally-owned school facilities or the current condition of these facilities. Given the Authority's immediate need to obtain some baseline school facility information, it was determined that, at this stage, the most cost effective and efficient method by which to gather baseline facility data and achieve the Authority's goals with the Needs Survey, was to commission a survey based on the observations of trained data collectors with verification from superintendents and other local school officials. A data collection survey completed by trained data collectors, in consultation with superintendents and school officials, for each school would provide the Authority with important baseline facility information in a standard format and in a timely manner.
- The Commonwealth was divided into six planning areas based on district boundaries, the number of schools per district, and geographical adjacencies. A project coordinator was assigned to each planning area to provide local school officials with a single point of contact. The following map identifies district boundaries within the six planning areas.

## Needs Survey Report

### Step 2 Development of Survey Tool and Database Construction

- The design of the survey tool was based on (1) data requirements that were identified by the Authority and (2) widely-available school facilities data that could be standardized across many school sizes, ages, and building types.
- Based on prior experience in assessing the condition of schools in other states, DeJONG recommended that 7 site and 18 building systems be included in the survey tool. These systems are identified and discussed in more detail later in this Report.
- Based on the data requirements and using pre-existing software programs and database layouts that were the product of prior facilities assessment projects by DeJONG, a database was designed and built to store the data captured through the Needs Survey.
- Basic school and district information, such as school name and address, current enrollment, district, and district contact names and addresses, was gathered from existing sources, including the DOE, and entered into the database.
- A prototype of the survey tool was developed, tested and reviewed to ensure that the data requirements were fully met and that the information would be collected in a standard format. The survey tool included a system of secure web forms that enabled data collectors to enter survey data via the internet. It is expected that the web forms will be modified to permit districts to access Needs Survey information in the future.
- Prior to its full rollout, the survey tool was tested on a school district by project coordinators, Authority staff members, and other project staff. This pilot phase gave the project staff the opportunity to fine-tune both the survey tool and the underlying data collection effort. Issues identified through this test were resolved by making adjustments to the survey tool and/or data collection methodology.

### Step 3 Conduct Needs Survey

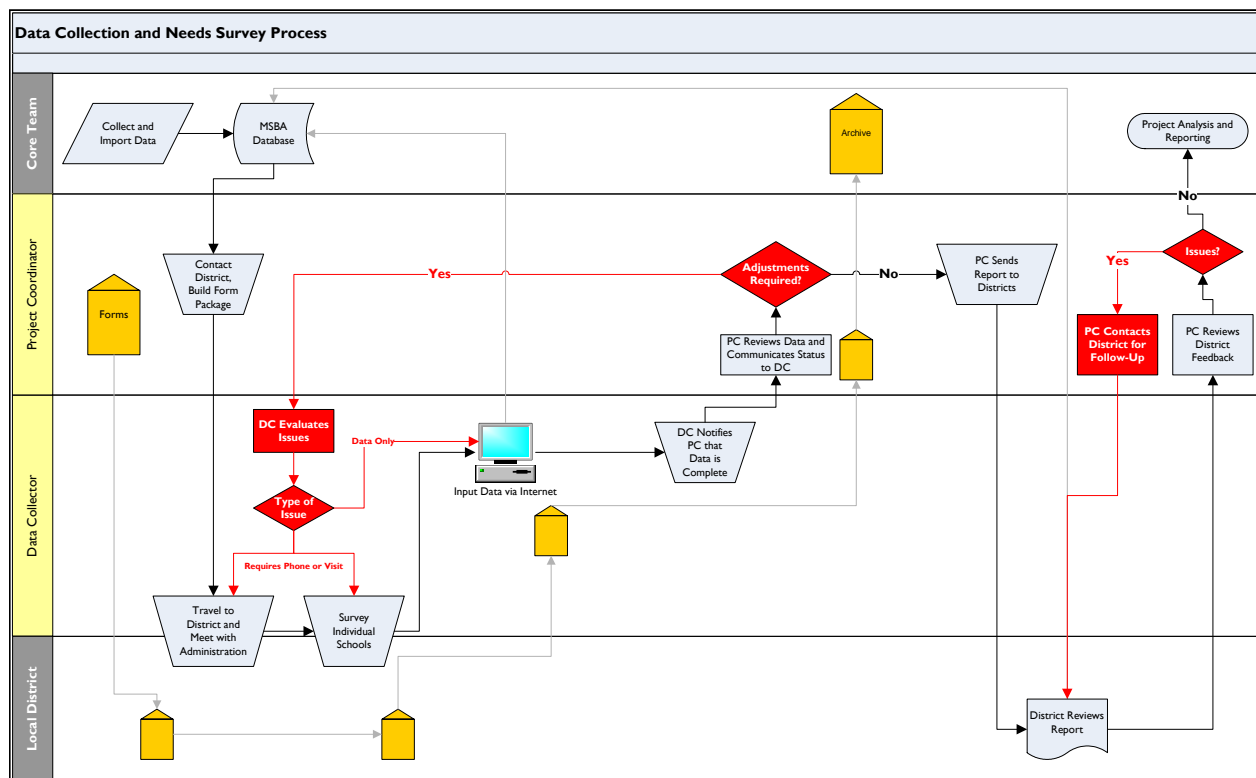

- Approximately thirty data collectors were hired to visit each school facility in every district in the Commonwealth and collect data utilizing the survey tool. The data collectors included a number of former superintendents and principals from the Massachusetts Association of School Superintendents, the Massachusetts Association of School Committees, the Massachusetts Association of School Business Officials, and the New England School Development Council as well as experienced personnel in the fields of design, construction, engineering, planning and education.
- The data collectors were trained in the Needs Survey data collection process and were taught how to complete the survey tool working with the superintendents and local school officials. The training was a combination of in-house and in-the-field instruction.
- Before the data collectors were deployed, the Authority's Executive Director sent a letter to the Superintendent of each school district describing the Needs Survey, explaining the data collection process, and identifying a list of information that the district should compile to assist in the data collection effort.
- The project coordinators were the main point of contact with the school districts. The project coordinators worked with each school district to schedule dates for the on-site data collection.
- Project coordinators and/or data collectors visited each school facility to gather data using the survey tool. The on-site process included meeting with both district representatives and a representative of the facility being surveyed and walking through the building to observe general building conditions.

# Needs Survey Report

## Step 4 Validation of Data

- A critical component of the Needs Survey was validation of the data by the school district superintendent. After the on-site data collection effort, data was entered into the database. District superintendents were emailed a District Review Report and asked to verify the work of the data collectors and expand upon any other facilities-related items for the Authority’s attention. They were asked to note any discrepancies on the report and forward this information to their project coordinator. Project coordinators reviewed any additional information submitted by a school district and followed up with district officials as necessary.
- Monitoring and troubleshooting was ongoing throughout the data collection effort. It involved spot checking the data collectors in the field and addressing issues as they arose. Each of the project coordinators was responsible for maintaining continuous communication with the data collectors.

The flow chart below illustrates the data collection process outlined in the above steps.

## Needs Survey Report

### Step 5 Quality Assurance

- The data was tested and evaluated on a regular basis throughout the data collection process through a series of data queries and summary reports. Project coordinators and data collectors worked together to identify and resolve any data discrepancies.
- Midway through the data collection effort, a cross section of completed schools was identified for analysis. The Authority was provided with a sample of the data being collected to review and evaluate how the data collection effort was proceeding.
- Issues and discrepancies were identified by superintendents, project coordinators, and data collectors, and any necessary corrections were made as part of an ongoing process of quality assurance.
- Each district superintendent was provided with a final summary report and given another opportunity to validate the findings.

### Step 6 Findings

- The information included in this Final Report provides an overall understanding of the general condition of school facilities in the Commonwealth. A summary report has been generated statewide, by district, and by school rating. Each of these summary reports appears in the Appendix of this Final Report. These summary reports will provide the Authority with a general understanding of the school facilities in Massachusetts, including information on types of schools, sizes of schools by number of students and square footage, ages of schools, and general conditions of schools.
- District summary reports have been generated and mailed to legislators, mayors, and boards of selectmen throughout the Commonwealth.
- These district summary reports will be available through the Authority's website.

# Needs Survey Report

## Statewide School Facility Findings

### Number of Schools & Square Footage

There are 1,817 schools, which are composed of 2,025 school-related permanent buildings and 203 temporary buildings that support 950,798 students in 330 school districts in Massachusetts. The largest number of buildings house elementary school programs. Every school facility located within a school district has been identified and classified by one of the following facility types.

Type	Grades Served
Pre- K/K Centers	Pre-Kindergarten and Kindergarten only
Elementary	Generally ranging from K - 05
Middle	Generally ranging from 6 -8
Middle / High	Generally ranging from 6-12
High School	Generally ranging from 9-12
K-12	Serves grades K-12

There is a very small percentage, less than 1%, of temporary square footage in the Commonwealth. This indicates that there is little evidence of overcrowding and that most of the space needs for Massachusetts schools are being met through the use of permanent school facility space. The chart below compares permanent and temporary space by number of buildings and square footage.

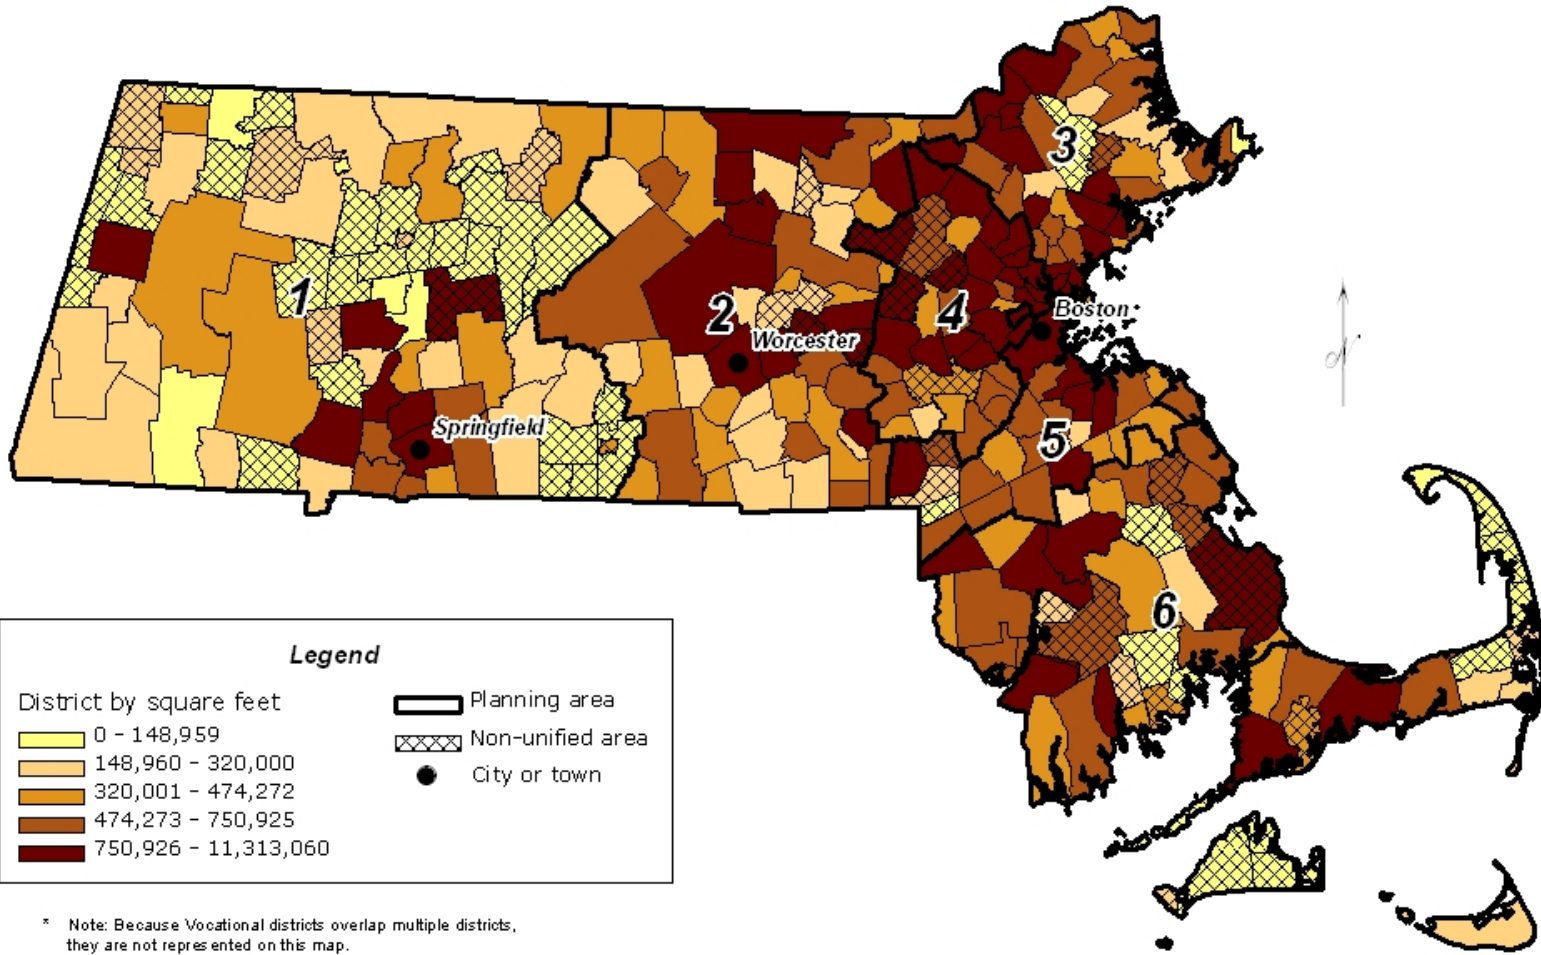

School Type	Schools	Permanent Buildings	Temporary Buildings	Permanent	Temporary	Total Area	Average Area
				SqFt	SqFt	SqFt	Total
Pre-K / K Center	<b>68</b>	64	7	1,701,521	20,117	1,721,638	<b>25,318</b>
Elementary School	<b>1,127</b>	1,200	138	68,914,322	532,178	69,446,500	<b>61,621</b>
Middle School	<b>292</b>	307	27	34,063,635	200,172	34,263,807	<b>117,342</b>
Middle/High School	<b>40</b>	40	3	4,896,428	34,643	4,931,071	<b>123,277</b>
High School	<b>266</b>	382	27	55,525,274	169,253	55,694,527	<b>209,378</b>
K - 12	<b>24</b>	32	1	5,331,795	2,500	5,334,295	<b>222,262</b>
<b>Total</b>	<b>1,817</b>	<b>2,025</b>	<b>203</b>	<b>170,432,975</b>	<b>958,863</b>	<b>171,391,838</b>	<b>94,327</b>

The map on the following page illustrates total square footage by district.

Needs Survey Report

### Massachusetts School Districts by Total Square Footage

\* Note: Because Vocational districts overlap multiple districts, they are not represented on this map.

\*\* Note: School districts located within existing boundaries of another district were merged for the purposes of this illustration.

0 20 40 60 Miles

# Needs Survey Report

## Age & Condition of Schools

Massachusetts schools generally are in good condition, despite the number of buildings that were originally built in the baby boom years of the 1950s and 1960s.

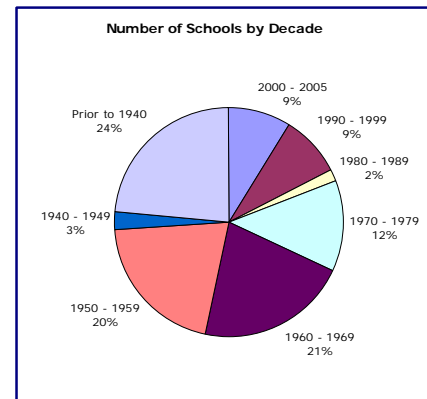

- 76% of Massachusetts schools received a rating of 1 or 2, meaning that they generally are in good condition, with few building systems that may need attention.
- Only 3% of schools in the Commonwealth, or only 62 schools, received a rating of 4, meaning that they are in poor condition. Of the 62 schools, 11 are on the Waiting List.

The good condition of Massachusetts schools is largely a result of the substantial and continuing financial commitment during the past 60 years by the Commonwealth and municipalities towards building or renovating educational facility space.

- The Authority is making approximately \$11 billion in payments on 1,156 of the 1,817 schools in the Commonwealth for construction and renovation projects undertaken between 1986 and 2005.
- Since 1990, over half of the existing 170 million square feet of school facility space has been built new, has had an addition, or has undergone some renovation.

The table below provides the weighted average age of school buildings by decade, along with the aggregate average general condition rating of all the schools built within that decade, which was assigned during the Needs Survey. Since many schools are made up of multiple buildings, the chart and graph indicate a weighted average age. For example, if Building X was built in 1972 and is 20,000 sq. ft. and Building Y was built in 1995 and is 5,000 sq. ft., the weighted year built would be 1977. There is more “weight” assigned to the 1972 building because it is larger.

School Weighted Average Age of Buildings	Wt. Avg Score	Total Schools	Percent	Enrollment	Area
2000 - 2005	1.01	159	9%	94,937	18,987,915
1990 - 1999	1.11	155	9%	84,209	14,491,186
1980 - 1989	1.29	29	2%	16,824	2,945,748
1970 - 1979	1.87	226	12%	163,351	33,874,089
1960 - 1969	2.05	382	21%	218,854	37,954,969
1950 - 1959	2.06	367	20%	181,820	31,291,618
1940 - 1949	2.10	46	3%	19,017	3,014,197
1930 - 1939	2.32	108	6%	52,107	10,302,189
1920 - 1929	2.51	122	7%	51,466	8,937,580
1910 - 1919	2.62	70	4%	21,699	3,737,242
1900 - 1910	2.50	52	3%	16,190	2,574,005
Prior to 1900	2.81	71	4%	21,289	3,281,100
Schools located within one of the above school facilities		30	2%	9,035	-
<b>Total Number of Schools</b>		<b>1,817</b>		<b>950,798</b>	<b>171,391,838</b>

# Needs Survey Report

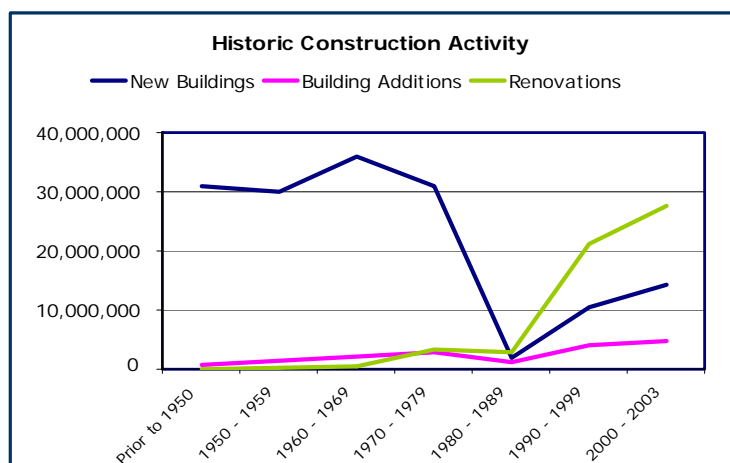

## Renovations and Additions

Based on data collected and presented in the table below, the pace of school facility construction and renovation in Massachusetts has been steady at approximately 35 million square feet per decade. Again, this is in part due to a substantial financial commitment that the Commonwealth and municipalities have made during the past 60 years.

Construction Type	Prior to 1950	1950 - 1959	1960 - 1969	1970 - 1979	1980 - 1989	1990 - 1999	2000 - 2005	Total
New Buildings	31,067,137	29,897,724	35,886,376	31,034,211	1,793,746	10,493,569	14,336,625	154,509,388
Building Additions	779,176	1,393,894	2,068,593	2,839,878	1,152,002	3,997,617	4,651,290	16,882,450
Renovations	-	196,540	482,958	3,271,432	2,752,548	21,142,071	27,563,447	55,408,996
<b>Total</b>	<b>31,846,313</b>	<b>31,488,158</b>	<b>38,437,927</b>	<b>37,145,521</b>	<b>5,698,296</b>	<b>35,633,257</b>	<b>46,551,362</b>	<b>226,800,834</b>

\*Note: The term renovation may include anything from minor repairs to comprehensive restoration of historic buildings.

\*\*Note: The total of new building and building additions square footage sums to the 171 million of total square footage in the Commonwealth. The 226 million total square footage number in this chart includes both the 171 million of existing square footage and the 55 million of that 171 million that has been renovated since 1950.

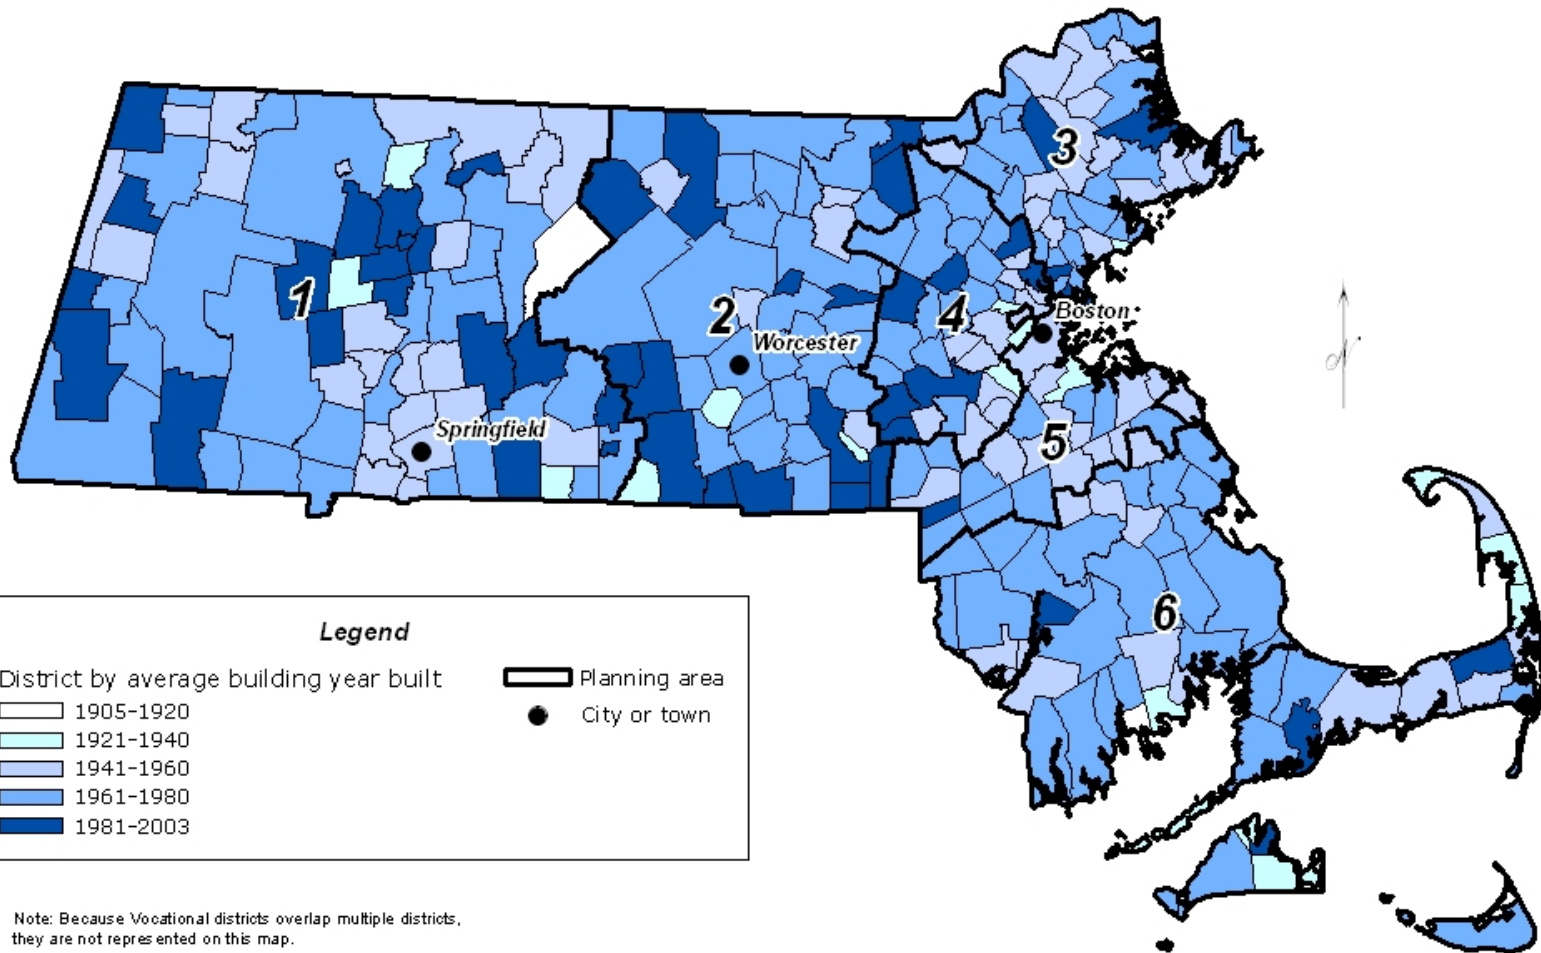

- The historical level of square footage built new or renovated has been approximately 35 million square feet per decade or approximately 3.5 million square feet per year.
- The only exception to the average is the decade of the 1980s, during which there were two recessions and the introduction of Proposition 2½.
- Between 2000 and 2005, the amount of school facility square footage built new or renovated – 46,551,362 square feet – far surpassed the amount of square footage built new or renovated in any previous decade.
- In addition, approximately 7 million square feet of school construction and renovation projects are on the Waiting List and should be completed within the next several years.
- It should be noted that the building boom between 2000 and 2005 occurred even though enrollment has been declining. Statewide enrollment has declined since 2000 and will continue to decline for the foreseeable future, according to the DOE’s 10-year enrollment projections.
- Approximately one-half of the existing 170 million square feet of school facility space has been built new or has undergone some renovation since 1990.
- Since 1990, renovations have significantly surpassed new construction.
- Prior to 1968, the former program only reimbursed for new construction.

The map on the following page illustrates the average age of all buildings within a district.

# Needs Survey Report

## Massachusetts School Districts by Average Building Year Built

\* Note: Because Vocational districts overlap multiple districts, they are not represented on this map.

\*\* Note: School districts located within existing boundaries of another district were merged for the purposes of this illustration.

## Needs Survey Report

### Acreage

The average site size for a Massachusetts school facility is 18 acres. Generally, eastern Massachusetts is densely populated and western Massachusetts has topographical constraints, but, as indicated in the table below, site acreage is adequate in most cases. As one would expect, the average acreage for a high school is the largest at 41 acres per school, followed by Middle/High Schools and K-12 Schools. The table below illustrates the average number of acres per school site by grade level.

School Type	Schools	Total Area	Site Acreage		
			Acres	Average	% of Total
Pre-K / K Center	68	1,721,638	327	5	1.0%
Elementary School	1,127	69,446,500	13,814	12	41.5%
Middle School	292	34,263,807	6,257	21	18.8%
Middle/High School	40	4,931,071	1,315	33	4.0%
High School	266	55,694,527	10,900	41	32.8%
K - 12	24	5,334,295	647	27	1.9%
<b>Total</b>	<b>1,817</b>	<b>171,391,838</b>	<b>33,261</b>	<b>18</b>	

According to the Council of Educational Facility Planners International [CEFPI], many states require a site size that is based upon a certain number of acres for each school level with additional acres for each one hundred students above that set number. While CEFPI is not a standards setting organization, the subsequent site sizes were published in past editions of CEFPI's *The Guide for Planning Educational Facilities*: 10 acres plus 1 acre per 100 students for an Elementary School, 20 acres plus 1 acre per 100 students for a Middle School, and 30 acres plus 1 acre per 100 students for a High School.

These are general guidelines and may not always take into consideration the following:

- **Attainability:** There can be difficulties of obtaining sizeable tracts of land in densely populated urban areas. Schools located in these areas may not be able to provide on-site parking and may share play areas and ball fields with the community.
- **Topography:** Wetlands, floodplains, hilly topography, and storm water retainage and release all can affect the amount of available or adequate acreage on a site.
- **Accessibility:** Access to and from the site which has connection to a major highway or road artery is an important factor.
- **Environmental Factors:** Aside from the surface characteristics, sub-surface conditions such as poor soil, high water table, or voids, may further impede site sizes.

## Needs Survey Report

### Condition Review

A major component of the Needs Survey was an assessment to determine the general condition of certain site and building systems. The design of the survey tool was based on (1) data requirements identified by the Authority and (2) widely-available school facilities data that could be standardized across many school sizes, ages, and building types. The survey tool, developed in conjunction with DeJONG, was based on standardized data collection techniques and included 7 site and 18 building systems to be surveyed for each school facility. The methodology for this review was to provide a score (or rating) for each of the 7 site and 18 building systems. An overall building score was generated based on the observations of the data collector, information provided by the district, and the ratings on the systems listed below.

The survey tool was based on widely-available data that divided school buildings into several construction systems (foundation, electrical, roofing, etc.) and subsystems. These systems and subsystems were combined into the 7 site and 18 building systems listed below to accommodate the data collectors in observing the systems and subsystems. In some cases, data collectors could not physically observe the systems at particular schools. In those cases, data collectors questioned district facility personnel, principals and/or plant operators about the condition and obtained the relevant data from the district personnel. It should be emphasized that this was not a comprehensive assessment by architects and engineers, but was an attempt to gather baseline data.

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

The Needs Survey was based on the observations of the data collectors who evaluated the site and building systems listed above during their site visit and walk-through of the facility. The Needs Survey was not a comprehensive architectural and engineering assessment that collected specific deficiencies.

For example, during the Needs Survey, a data collector may have noted that the parking lot needs minor repairs. A comprehensive architectural

## Needs Survey Report

and engineering assessment may contain a detailed listing of the specific line-item deficiencies that amount to the same general conclusion. For example, a comprehensive assessment may note the following line-item deficiencies:

- Accessible parking spaces are not marked correctly.
- Parking lot striping is missing for part of the parking lot.
- A small area of parking should be regraded to eliminate ponding and the formation of ice.
- Wheel stops are missing on the edge that borders the playground.
- The transition from the street into the parking lot is deteriorated and needs to be replaced.

These deficiencies taken together typically indicate a parking lot needs relatively minor repairs. While the Needs Survey does not provide these individual deficiencies, it does provide a comparative analysis of building conditions.

### Building Categorization

Based on the data collected, school buildings were placed in one of the following categories:

Rating	Definition	Potential Future Action
1	Building is in good condition with few or no building systems needing attention.	Minor Renovation or General Maintenance
2	The building is in generally good condition, however a few building systems may need attention.	Moderate Renovation
3	The building is in fair to poor condition and some building systems may need to be repaired or replaced.	Moderate to Major Renovation
4	The building is in poor condition and a possible candidate for major renovation or replacement.	Major Renovation or Replacement

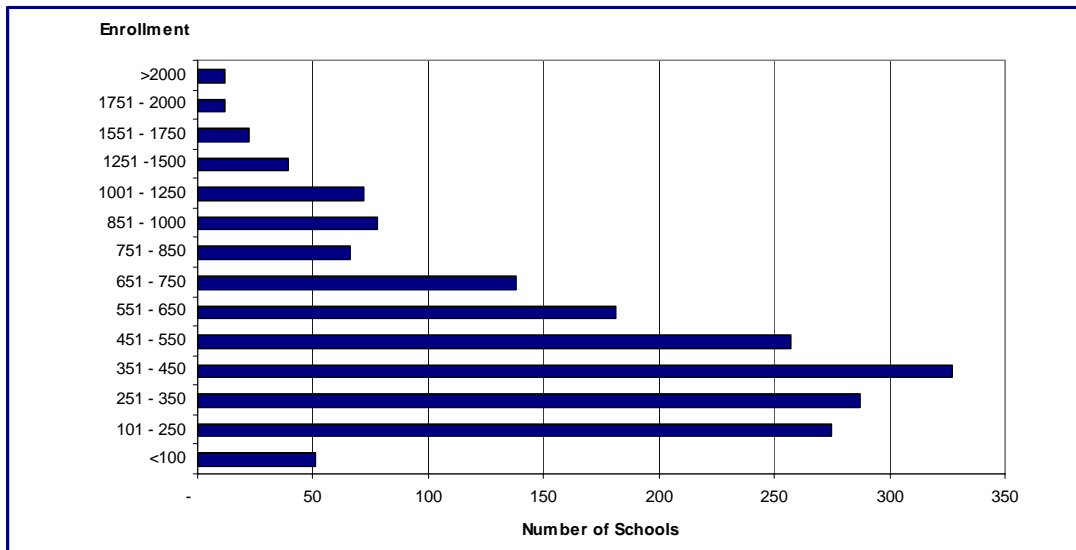

As previously stated, 76% of the individual buildings that comprise the 1,817 schools are in good condition and have only a few building systems that may need attention. Since 1990, over 80 million sq. ft. — more than half of the total square footage in the Commonwealth — has been built new or has had some kind of renovation. Less than 3%, or 62 schools composed of 94 separate buildings, may be in need of major renovation or replacement. The following chart indicates the number of buildings, total square footage, and the appropriate categorization.

School Type	# of Schools	1		2		3		4	
		Buildings	Area (GSF)	Buildings	Area (GSF)	Buildings	Area (GSF)	Buildings	Area (GSF)
Pre-K / K Center	68	23	642,045	24	556,145	21	462,348	3	61,100
Elementary School	1,127	608	36,716,151	411	19,416,122	263	11,403,326	56	1,910,901
Middle School	292	172	18,421,657	95	9,066,206	57	5,948,412	10	827,532
Middle/High School	40	22	2,968,452	11	1,151,694	8	746,353	2	64,572
High School	266	198	27,660,164	106	14,982,694	83	10,675,242	22	2,376,427

# Needs Survey Report

## School Size

More than 83% of schools in the Commonwealth have an enrollment of 750 or fewer students. Approximately 34% have fewer than 350 students, while less than 10% have 1,000 students or more. The accompanying graph and table state the number and percentage of schools in Massachusetts by size of enrollment.

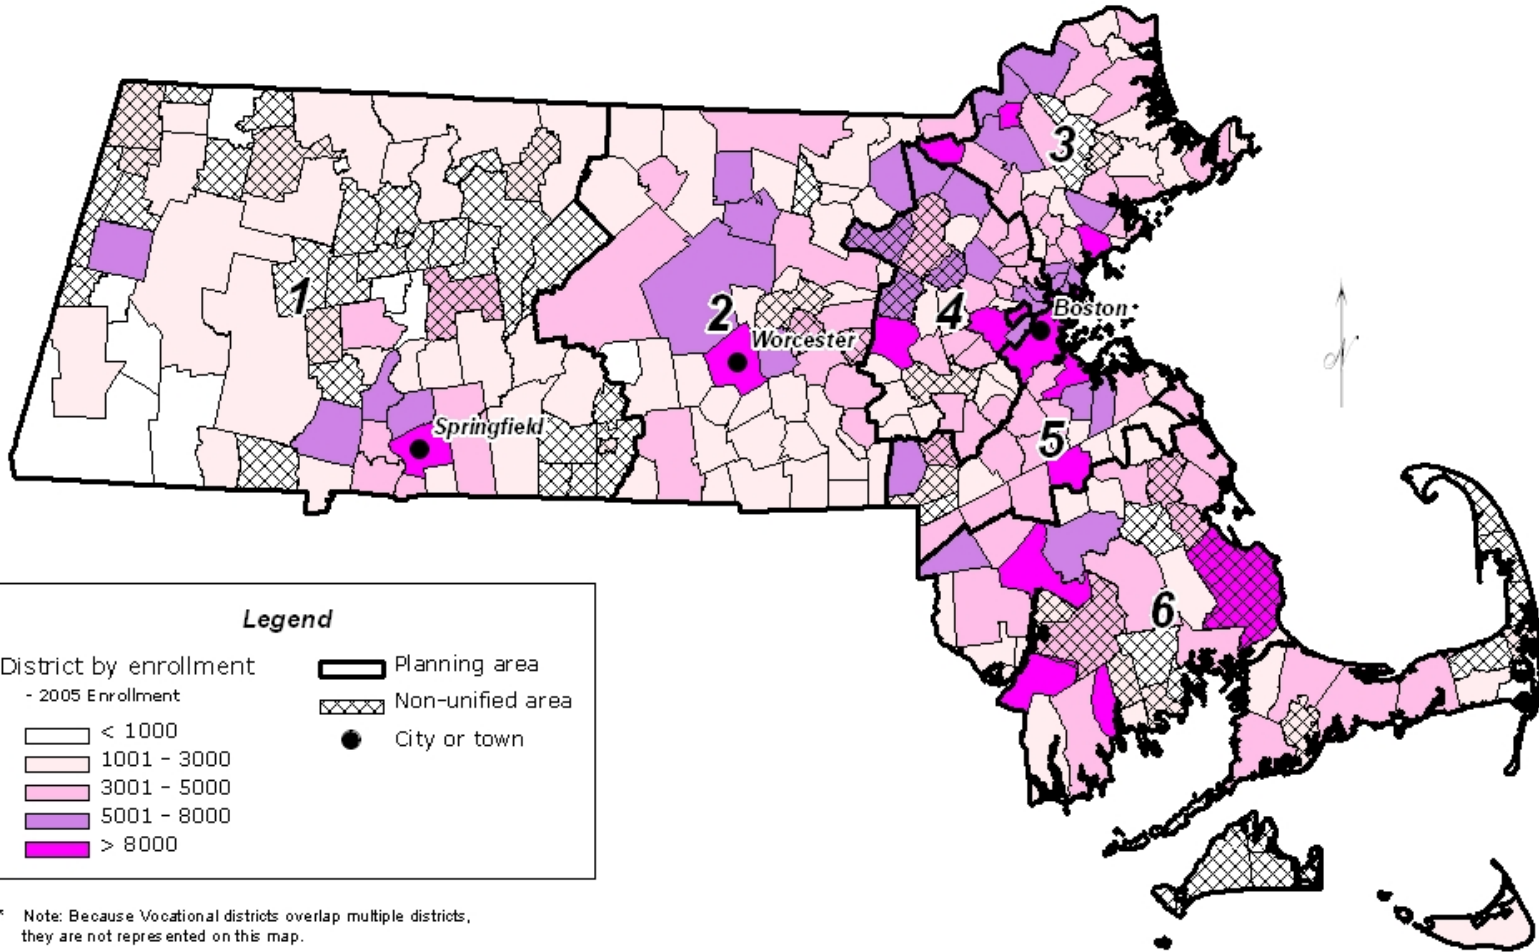

Enrollment	Pre-K / K Center	Elementary School	Middle School	Middle/High School	High School	K - 12	Total Schools
<100	14	19	5	4	7	2	51
101 - 250	37	223	2	7	5	1	275
251 - 350	13	237	20	1	16	-	287
351 - 450	3	267	34	2	20	1	327

## Needs Survey Report

### Square Footage per Student

Massachusetts schools have been built 32% to 39% larger, on average, than the maximum gross square footage space requirements per student in the Department of Education regulations. The aggregated average space available per student in Massachusetts ranges from 138 gross sq. ft. at the Pre-K / K level to 235 gross sq. ft. at the K-12 school level. These averages far exceed the Massachusetts Department of Education space standards and national standards.

According to the 11<sup>th</sup> Annual Construction Report 2006, the median sq. ft. per student nationwide for new construction expected to be completed during 2006 are **120.2 gross sq. ft.** per elementary student, **146.2 gross sq. ft.** per middle school student, and **162.5 gross sq. ft.** per high school student. As reflected in the chart below, DOE's space standards, which have not been updated recently, were consistent with these 2006 national standards.

Gross Square Footage Comparison			
School Type	DOE Space Standards	As Reported from Needs Survey	% Difference
Elementary School	115 gsf/student	154 gsf/student	+ 32%
Middle School	135 gsf/student	186 gsf/student	+ 33%
High School	155 gsf/student	215 gsf/student	+ 39%

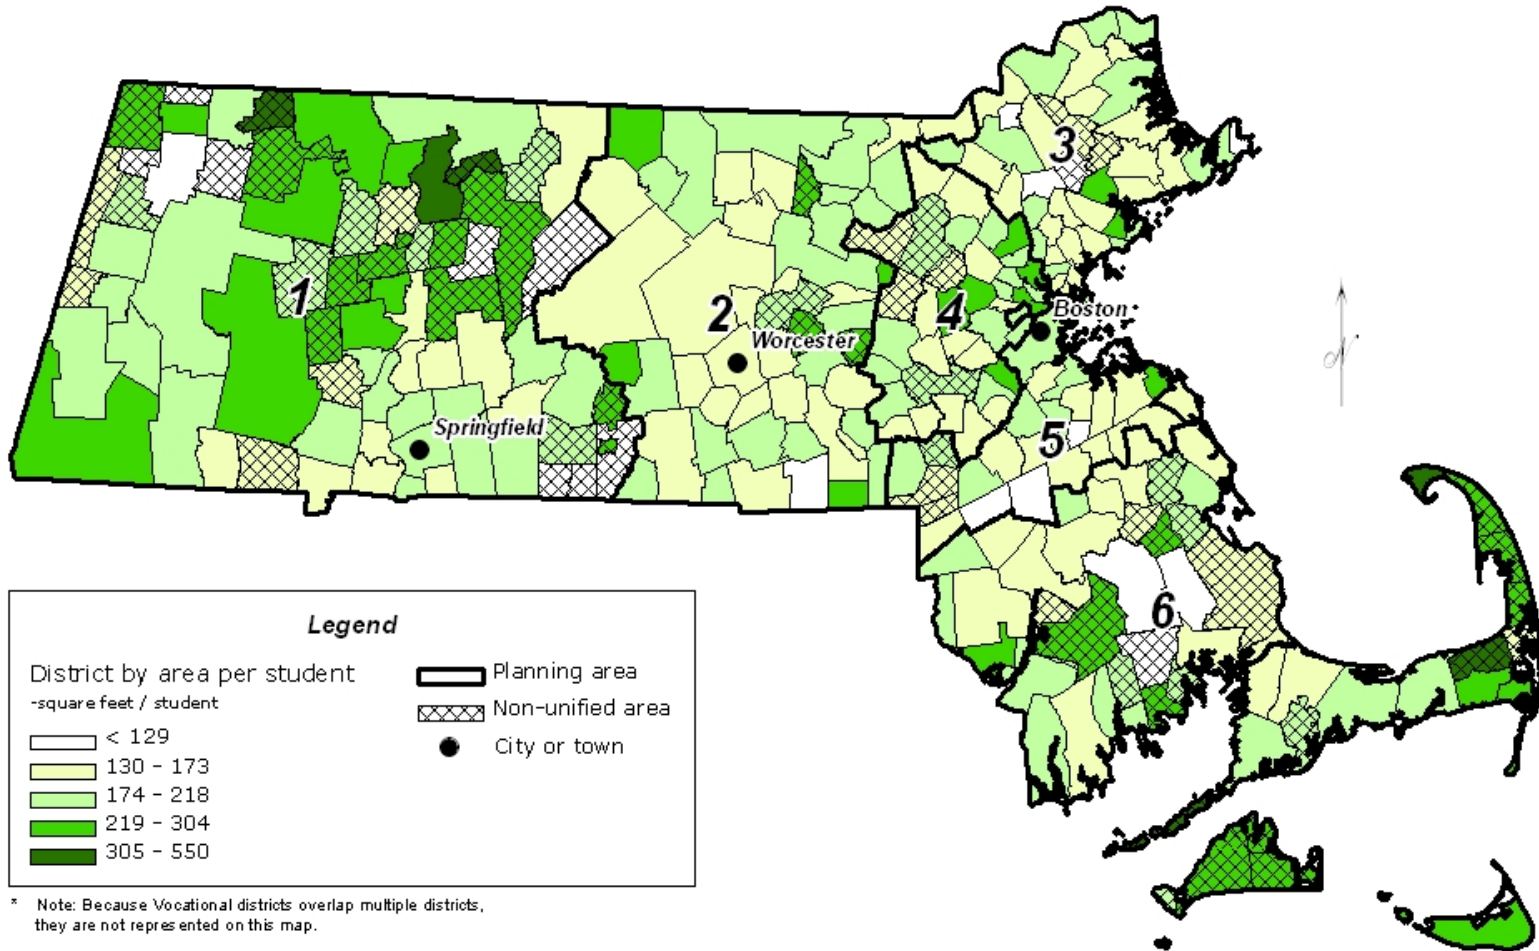

The Needs Survey has revealed that the average school in Massachusetts is significantly larger than the gross square footage stated in the former DOE regulations. This affected the cost ceiling set by the DOE. In order to determine the appropriate size of a building based upon enrollment, and therefore, cost of the building, the Department of Education had maximum square footage regulations by type of school building: Elementary, Middle, High and Vocational School. Funding from the Commonwealth for a local school project was dependent upon a formula composed of the space standard regulations (see table above), projected enrollment proposed by the school district, and the cost per square foot at the commencement of construction, as established in DOE regulations. The product of this formula constituted a budgetary ceiling for school projects, above which the DOE would not reimburse. These space standards have not been adjusted for some time. In fact, very few schools have been built at the DOE maximum regulation square footages with most significantly larger. This variation may be attributable in part to buildings being constructed based on inflated or inaccurate enrollment projections. Furthermore, the actual square footage per student ratio varies widely from school to school, even among schools of similar educational mission and enrollment capacity.

School Type	Enrollment	Total Sq Ft	Sq. Ft./ Student
Pre-K / K Center	12,451	1,721,638	<b>138</b>
Elementary School	449,662	69,446,500	<b>154</b>
Middle School	184,050	34,263,807	<b>186</b>
Middle/High School	22,947	4,931,071	<b>215</b>
High School	259,032	55,694,527	<b>215</b>
K - 12	22,656	5,334,295	<b>235</b>
<b>Total</b>	950,798	171,391,838	<b>180</b>

# Needs Survey Report

## Specialized Areas

Most school facilities include specialized spaces for Science Classrooms, Science Labs, Art, and Music.

The table below reflects the number of classrooms dedicated for Science, Art, and Music, as well as the number of Science labs and the total number of classrooms per grade level. The number of dedicated classrooms for Science, Art, and Music does not include classrooms that may be used for multiple purposes. It only counts those classrooms dedicated exclusively to Science, Art, or Music.

	# of Classrooms	Avg. # of Classrooms/ School	# of Dedicated Classrooms			
			Science Classroom	Science Lab	Art	Music
Pre-K / K Center	718	11	0	0	10	4
Elementary School	27,578	24	207	228	898	839
Middle School	12,314	42	438	949	419	466
Middle/High School	1,703	43	78	112	66	49
High School	15,932	60	525	1569	594	421
K - 12	1,579	66	22	153	53	33
<b>Total</b>	<b>59,824</b>	<b>33</b>	<b>1,270</b>	<b>3,011</b>	<b>2,040</b>	<b>1,812</b>

The chart below reflects the number of schools, by grade level, that maintain Science, Art, and Music spaces within their facilities. The last column indicates that some of these spaces are shared. As one would expect, the majority of high schools and upper grade level schools maintain space for Science, Art, and Music, while the Pre-K / K Centers and elementary schools tend to have more Art and Music space and relatively less Science space.

School Type	# of Schools	Science Space		Art Space		Music Space		Art/Music/Science	
		# of Schools	% of Total	# of Schools	% of Total	# of Schools	% of Total	# of Schools	% of Total

# Needs Survey Report

## Common Spaces

Common spaces are those that the entire student body will use at some point of the day or week and are considered to support the educational program of the school. These typically include libraries, gymnasiums, cafeterias and multi-purpose rooms. Multi-purpose rooms are often larger spaces used for both student dining and physical education, particularly at the elementary level. There are over 22 million square feet dedicated to common spaces in the Commonwealth, equal to approximately 13% of the total square footage. Over 85% of the schools maintain a library, cafeteria, and gymnasium, while 21% maintain a multi-purpose room which may be utilized for one or more of the aforementioned uses. In addition, 33% of schools maintain an auditorium, providing a total of 331,846 seats.

The following table illustrates the number of common spaces and the corresponding square footage and the number of auditoriums and their seating capacity. There are several reasons why every school would not maintain a library, cafeteria, or gymnasium. These include, but are not limited to:

- Two or more schools sharing the same campus may also share a library, cafeteria or gymnasium.
- A school-within-a-school concept — There are multiple schools that the DOE considers separate schools, to which they assign separate administrative numbers, even though they are located within the same physical building.
- Some specialized programs may not require certain spaces. For example, a full library may not be necessary in certain alternative school settings because library resources are available nearby in the community.
- A multi-purpose room may be utilized as the gymnasium, cafeteria and/or auditorium.

School Type	# of Schools	Library		Cafeteria		Gymnasium		Auditorium		Multi-Purpose

## Needs Survey Report

### Glossary of Terms

The following list includes a brief description of some of the terms and abbreviations used throughout this Report:

**Building** – A structure, located on a school site or campus, in which school children participate in educational programs.

**Building System** – Separate components with unique purposes that make up a building such as roofing, HVAC, windows, flooring, electric, lighting, etc.

**Campus** – A campus is a site where one or more schools is/are located.

**Enrollment** – The official number of students attending a school as reported by the October 1<sup>st</sup> enrollment to the Department of Education.

**Permanent Space** - A building that is attached to a foundation and cannot be easily removed from a site.

**Planning Area** - The Commonwealth was divided into six planning areas for the Needs Survey, based on district boundaries, the number of schools per district, and geographical adjacencies.

**School** – A building or a series of buildings identified by the Massachusetts Department of Education as public, Pre-K through 12 educational institutions that support educational programs based on the Massachusetts curriculum frameworks.

**School District** – A general term applied to a legally constituted school entity which is recognized by the Board of Education. They may include city, local, regional, and joint vocational school districts.

**School Type** – There are 57 variations of grade configurations in schools across the Commonwealth. For the purposes of this Report, the following school types were developed from the grades served:

<u>Type</u>	<u>Grades Served</u>
Pre K/K Centers	Pre-Kindergarten and Kindergarten only
Elementary	Generally ranging from K - 05
Middle	Generally ranging from 6 -8
Middle / High	Generally ranging from 6-12
High School	Generally ranging from 9-12
K-12	Serves grades K-12

**Science Classroom** – A classroom space used for science specifically and usually provides an area for teacher demonstration.

**Science Lab** – A classroom that contains sinks, utilities, and counter space for individual or small groups of students to conduct experiments and projects.

**Square Feet per Student** – The square feet per student is calculated by dividing the total gross square footage by the enrollment.

**Site** – Location of a school's building[s] usually measured in acreage.

**Sq. Ft.** – Square Feet. A unit of measure usually used to measure building space.

## Needs Survey Report

**Students per Classroom** – The number of students per classroom is calculated by dividing total number of classrooms by the enrollment.

**Temporary Space** – A prefabricated building that is not attached to a foundation and can be removed from a site in the future.

**The Authority** - The Massachusetts School Building Authority

## Needs Survey Report

### District Summaries

There are 330 school districts in the Commonwealth. The following is a description of each of the column headings appearing in the District Summary table.

**District #** - The code assigned by the Massachusetts Department of Education.

**District Name** – Name of the school district.

**# of Schools** – Number of schools in a school district.

**2005-06 Enrollment** – Official October 1<sup>st</sup> enrollment as reported by the Massachusetts Department of Education for the 2005-06 school year.

**Acreage** – Measurement of land.

**# Perm Buildings** – Total number of permanent buildings.

**Perm SF** – Total amount of permanent square footage.

**# Temp Buildings** – Total number of temporary buildings.

**Temp SF** – Total amount of temporary square footage.

**Total Buildings** – Total number of buildings (permanent and temporary).

**Total SF** – Total amount of square footage (permanent and temporary).

**SF / Student** – The total square footage divided by enrollment.

**Year Master Plan Dev** – The year the district's master plan was developed.

## Needs Survey Report

### School Summaries

There are 1,817 schools in the Commonwealth. A summary for each school is provided in the following two sections. The first section is a listing in alphabetical order. The second section is a listing grouped by the general condition rating assigned during the Needs Survey.

Please note that some buildings include multiple schools. In these cases, the building information is listed under one school, and the other school will reference the school where the building information is listed.

**District Name** – Name of the school district.

**School Name** – Name of the school.

**School Type** – Level of school based on the grades served.

**Grades Served** – Grade configuration of the school.

**Year Opened** – Year the building opened.

**Building Weighted Average Year** – The weighted average of all buildings that make up a school, which accounts for the original year each building was built and the original square footage of each building. For example, if Building X was built in 1972 and is 20,000 sq. ft. and Building Y was built in 1995 and is 5,000 sq. ft., the building weighted average year would be 1977. There is more “weight” assigned to the 1972 building because it is larger.

**Last Renovation** – Date of the last significant improvement to the school facility.

**Total Staff** – Number of full time staff including administration, custodial, etc.

**2005-06 Enrollment** – Official October 1<sup>st</sup> enrollment as reported by the Massachusetts Department of Education for the 2005-06 school year.

**Acreage** – Measurement of land.

**# Perm Buildings** – Total number of permanent buildings.

## Needs Survey Report

**Perm SF** – Total amount of permanent square footage.

**# Temp Buildings** – Total number of temporary buildings.

**Temp SF** – Total amount of temporary square footage.

**Total Buildings** – Total number of buildings (permanent and temporary).

**Total SF** – Total amount of square footage (permanent and temporary).

**SF / Student** – The total square footage divided by enrollment.

**# of Classrooms** – Number of instructional rooms within the building greater than 600 square feet.

**Students/Classroom** – Total number of students divided by the total number of classrooms.

**School Rating** – A 1-4 rating assigned during the Needs Survey representing the general condition of the building(s) that comprise(s) a school.

Rating	Definition	Potential Future Action
1	Building is in good condition with few or no building systems needing attention	Minor Renovation or General Maintenance
2	The building is in generally good condition, however a few building systems may need attention	Moderate Renovation
3	The building is in fair to poor condition and some building systems may need to be repaired or replaced.	Moderate to Major Renovation
4	The building is in poor condition and a possible candidate for major renovation or replacement	Major Renovation or Replacement
