

Massachusetts School Building Authority

Funding Affordable, Sustainable and Efficient Schools in Partnership with Local Communities

2016 SCHOOL SURVEY REPORT

ACKNOWLEDGMENTS

The Massachusetts School Building Authority (the “MSBA”) would like to extend its appreciation to the cities, towns, and regional school districts and the superintendents, principals, facility directors, and staff of all of the school districts in the Commonwealth who welcomed the assessors and provided them with valuable information regarding their school facilities. In addition, the MSBA would like to thank the Districts of Dedham, Lynn, and Needham for their generosity in providing schools and staff for the project’s training efforts.

The MSBA would also like to acknowledge the efforts of the organizations and individuals who made this survey possible. The MSBA thanks the Massachusetts Department of Elementary and Secondary Education (“DESE”) for its ongoing collaboration and its contributions and insights for the assessment of technology. The information collected will provide a baseline understanding of the building condition, general environment, and space utilization of school facilities across the Commonwealth.

The MSBA extends its gratitude to Treasurer and Receiver General of the Commonwealth Deborah B. Goldberg, Chairperson of the MSBA’s Board of Directors, and all of the MSBA’s Board of Directors for their encouragement and leadership in this important undertaking.

With the guidance and support of the following, the 2016 School Survey was an overwhelming success.

MASSACHUSETTS SCHOOL BUILDING AUTHORITY

MSBA Board of Directors

Deborah B. Goldberg	Treasurer and Receiver General of the Commonwealth, Chairperson of the MSBA’s Board of Directors
Matthew J. Deninger	Designee of the Commissioner of Education
Sean R. Cronin	Designee of the Secretary of Administration and Finance, Director of Finance, Executive Office for Administration and Finance
Richard Bertman	Founding Principal, CBT Architects (Term Ended May 2017)
Terry Kwan	Former teacher and Brookline School Committee Member
Gregory W. Sullivan	Former Inspector General
Sheila Vanderhoef	Former Eastham Town Administrator
Anne Brockelman	Senior Associate, Perry Dean Rogers Partners Architects

MSBA Staff

James A. MacDonald	Chief Executive Officer, First Deputy Treasurer	Maria Puopolo	Director of External Affairs
John K. McCarthy	Executive Director / Deputy Chief Executive Officer	Xiaolei Ji	Database Developer
Matthew J. Donovan	Director of Administration and Operations	Radhika Pragada	Web Applications Developer
Mary Pichetti	Director of Capital Planning	Sharon George	Business Architecture Analyst
Dennis M. Ryan	General Counsel	Phil Daley	Network Manager
Al Williams	Director of Information Technology	Kevin Collins	Project Manager
		Jess Deleconio	Senior Project Coordinator
		Peter Falk	Assistant Project Manager

The following MSBA staff participated in pre-planning subcommittees for the 2016 School Survey:

Diane Sullivan	Director of Program Management	Chris Alles	Senior Project Manager
Matthew Connolly	Director of Project Controls	Karl Brown	Senior Architect
John Jumpe	Director of Project Management	Christina Forde	Project Manager
Michael McGurl	Senior Project Manager	Christy Murray	Project Manager
Joseph Buckley	Chief Engineer	Kevin Sullivan	Project Manager
Katie Loeffler	Capital Program Manager		

INDEPENDENT CONSULTANTS

The MSBA worked closely with STV Incorporated and their consultants, Jacobs and Denterlein Worldwide, in providing a particular expertise to create and support a team of professional architects and engineers to conduct and successfully complete the 2016 School Survey.

STV Incorporated

David M. Ziskind, AIA	Principal in Charge
David Gonsalves	Project Manager
Robert Price Jepsen, AIA	Tool/ Report Development
Kyle Kramer, AIA	Report Development
Bradley Palmer	Project Controls
Judith O'Mara	Advisory Team
Jeffrey Manning PE	Advisory Team
Denise E. Hart	Scheduler
Debbie Murray	Scheduler
Robert Connors, PE	Quality Assurance Oversight
Mark W. Pelletier, PE	Quality Assurance Oversight
Emily Talcott	Senior Discipline Specialist

Jacobs

Paul Mills	Lead-Tool/ Report Development
Mark Mehlberger	Tool/ Report Development
Abigail Hobbs	Tool/ Report Development
Chris Taylor	Quality Assurance/Quality Control Reviewer
Indi Melendez	Document Production

Denterlein Worldwide

Geri Denterlein	Principal in Charge
Diana Pisciotta	Vice President
Jill Reilly	Vice President
Nathan Illsley	Senior Account Executive

The following assessors surveyed approximately 138 million square feet of school facilities across the Commonwealth:

STV Incorporated: Stephanie Amoh, Julianne Cancalosi, Akhila Ramesh Babu, Jose Delgado, Ana Gouveia, Kamrul Hasan, Nikole Loayza, Edwin Rivas, Andrew Shelburne, Rollin White, Jared Schultz

Jacobs: Justin Cooke; Alex Crowley; Candy Glass; Kerwin Mills, Chris Taylor

IN MEMORIAM

Commissioner of Elementary and Secondary Education,
Mitchell D. Chester, Ed. D.

Commissioner Mitchell Chester led the department starting in May 2008, and was, at the time of his death, the longest serving of the country's active chief state school officers. He passed away on June 26, 2017 at age 65.

He worked tirelessly to ensure that the nearly one million students in the Commonwealth enjoy equitable access to the highest quality education services and facilities. He will be long remembered for his unfailing dedication to the children of Massachusetts, for his urgent leadership that improved the lives of thousands, and for making our public school system a clear leader, both nationally and internationally.

Page intentionally left blank.

2016 SCHOOL SURVEY REPORT

Essex Technical High School, constructed in 2014 through a \$72 million grant from the Massachusetts School Building Authority and a \$21 million grant from the state, serves 1,440 students offering 19 vocational programs and 5 agricultural offerings. Seventeen districts joined together for the first newly formed regional district in decades to replace the North Shore Vocational High School and the Essex Agricultural School.

EXECUTIVE SUMMARY

The Massachusetts School Building Authority (MSBA) is a quasi-independent government authority created in 2004 by the Legislature to reform the process of funding capital improvement projects in the Commonwealth's public schools. The MSBA, which has a dedicated revenue stream of one penny of the state's 6.25-percent sales tax, has approved approximately \$5 billion dollars of grants at more than 650 schools since 2007. The MSBA has supported 246 core projects with grants of approximately \$4.4 billion, 219 Accelerated Repair Projects with grants of approximately \$330 million, 189 Green Repair Projects with grants of approximately \$220 million, and 8 Science Lab Initiative Projects with grants of approximately \$60 million.

Similar to the survey conducted in 2010, the data from the 2016 School Survey indicates that 84.1% of Massachusetts schools received a building condition rating of 1 or 2, meaning that the site and building conditions are in generally good condition and 95.6% of schools received a general environment rating of 1 or 2 meaning that the schools provide an adequate physical environment in which to teach and learn. The continued overall good condition is due in large part to the ongoing financial commitment of the municipalities and the Commonwealth.

The data from the 2016 School Survey also indicates that 270 of the 1,419 schools assessed received a building condition rating of 3 or 4, meaning that the site and building conditions require moderate to extensive renovation or are in poor conditions that will need to be addressed in the near future. The number of schools in need is more than the number of core program projects that the MSBA has supported since 2007. In addition, without continued capital expenditures, normal facility degradation associated with the aging of facilities will impact the percentage of Massachusetts schools receiving ratings of 1 and 2 for building conditions and general environment. While the Accelerated and Green Repair programs have supported grants of approximately \$550 million, the 2016 School Survey indicates that there are a large number of buildings where the roofs, windows, doors, and boilers are either in whole or in part over 20 years old (543 roofs, 786 windows and 516 boilers). Based on the annual cap and the number of core program invitations, the MSBA has funding to invite approximately 40 accelerated repair projects per year. In addition to the capital investment needed to maintain building conditions, there is a critical need to upgrade spaces required for contemporary education, technology and security to provide good educational environments.

While much progress has been made since 2004, the MSBA continues to receive over 80 Statements of Interest each calendar year for core program projects. Based on the annual cap, the MSBA has funding to invite approximately 15 to 20 of the over 80 core projects received annually. The MSBA is committed to seek ways to maximize its funding, up to its annual cap, to partner with Massachusetts communities to support the design and construction of educationally-appropriate, flexible, sustainable, and cost-effective public school facilities.

2016 SURVEY – PROCESS

The MSBA is required to conduct periodic school surveys in order to understand the conditions of public schools in Massachusetts and to inform the MSBA's grant program. Three surveys have been completed to date: in 2006, 2010 and 2016. In 2006, the MSBA completed the initial survey, which helped to create the first centralized database of school building data and established the baseline facilities conditions at more than 1,800 schools. In 2010, the survey verified, updated and supplemented the data collected in 2006. The 2016 School Survey will again verify, update and expand the database. The survey data is one of many tools that the MSBA uses when assessing applications for funding and to evaluate and develop programs that allow the MSBA to maximize its limited resources to ensure fair and equitable funding of school construction, renovation, and repair projects across the Commonwealth.

Differing from the previous surveys, the 2016 MSBA School Assessors did not visit schools that had received funding for new construction since 2007 and were either substantially complete or in the grant process. However, MSBA staff did collect certain data for technology or certain systems dependent upon the phase of the project. For these new construction projects, the MSBA is assuming ratings of the best conditions for building condition. The MSBA further determined that schools that had received funding for an addition/renovation, renovation, or repair would receive a site assessment to verify the ratings of the facilities. Accordingly, the 2016 School Survey did not assess 276 schools which were either in the MSBA's capital pipeline and/or had been constructed since 2000 and had a good building condition facilities condition index rating (less than 10%) from the 2010 survey. Given the MSBA's commitment to an annual Statement of Interest process, the MSBA anticipates that future surveys will follow this methodology and continue to forgo assessment for those projects currently in the funding process and/or buildings that recently completed new construction.

Data collection was carried out by a team of 15 design and engineering professionals. These assessors had diverse professional backgrounds, each with experience in facility design, construction, and condition assessment. To assure consistent and accurate data collection, assessors underwent a week-long training program comprised of classroom work and field experiences. In addition to the ongoing quality control process, the draft findings for each of the schools was made available to districts for review and input prior to the publication of the report.

A detailed scoring methodology was developed to calculate comparative ratings for each school in three categories:

- Building Condition
- General Environment
- Capacity Utilization

2016 – KEY FINDINGS

Number of Schools and Total Square Footage

There are 1,859 public schools in the Commonwealth. Of these, there are 1,697 schools eligible for MSBA funding, 1,695 were evaluated for this report, and 1,419 had site assessments. These 1,695 schools occupy 1,773 school-related permanent buildings totaling 173,508,438 Gross Square Feet (GSF) that support 886,074 students in 330 school districts. Elementary schools make up the largest number of public school buildings. Schools not evaluated for this report are:

- So-called “schools within a school”
- Schools excluded from MSBA funding, including: pre-K only schools, the Commonwealth charter schools, institutional schools, schools located in rented or leased building, and schools located in Department of Defense sites.
- Horace Mann charter schools identified after the assessment period (2)

Enrollment Trends ⁽¹⁾

At the time of the 2010 survey, there was a 3.3% statewide decline in K-12 public school enrollment from the 2004-2005 school year to approximately 900,478 students. Since then, enrollment declined roughly 1.6% statewide to approximately 886,074 students in 2015-2016.

⁽¹⁾ Analysis is based on public school students in kindergarten through grade 12 enrolled in traditional, regional, regional vocational, and agricultural schools and does not include pre-Kindergarten students or students enrolled in private schools, charter schools (except Horace Mann charter schools), educational collaboratives, or home-schooled students.

Capacity of Schools and use of Temporary Facilities

A review of the 1,419 schools assessed in the 2016 survey indicates that there is little evidence of widespread overcrowding. Most of the space needs for Massachusetts schools are being met through the use of permanent school facility space. Approximately 1.2% of the assessed classrooms in the Commonwealth are in temporary spaces.

- 605 out of 48,348 total assessed classrooms are located in temporary spaces.
- 98 schools or 7% of the state’s assessed public K-12 facilities, have more than 10% of their classroom space in temporary spaces.

Age of Schools

Since 2000, almost 59% of the approximately 173 million existing square feet of school facility space is new or renovated.

131 schools, or approximately 8% of the schools, are over 100 years old. Since the 2010 survey, 16 of the 131 schools have entered the MSBA’s grant program.

School Rating Summary

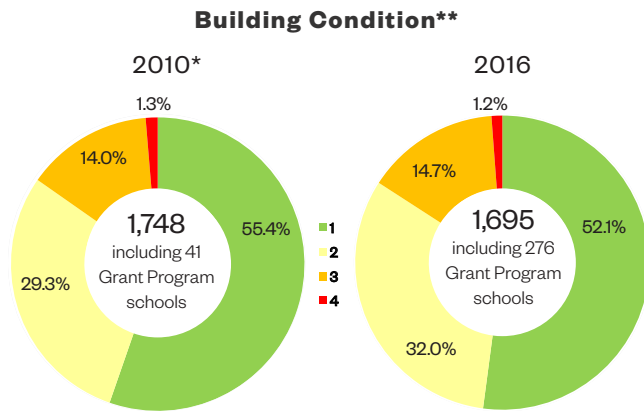

Overall, Massachusetts school buildings performed well in the primary scoring matrices. Due to the number of assessments and the timeline for the survey, the scope of the MSBA’s surveys has not included a robust educational program assessment. As part of its due diligence for the Statement of Interest application process, the MSBA looks to further understand the facility’s condition to offer the district’s educational program. Ratings used in the 2016 survey include:

- Building condition – an overall rating for the general conditions of a school facility’s major systems, such as roofing, HVAC, windows, and flooring. The building systems conditions were rated on a scale of 1 to 4, with a rating of 1 indicating the best conditions and a 4 indicating the poorest.
- General environment – an overall rating that reflects the school building’s Learning Environment, Building Safety, Universal Accessibility, Academic Sufficiency, Program Sufficiency, and Instructional Technology. The school’s general environment was rated on a scale of 1 to 4, with a rating of 1 indicating the best environment and a 4 indicating the poorest.
- Capacity utilization – an overall rating that reflects the school building’s capacity utilization was

determined at each individual school based on comparisons to statewide norms on a scale of over utilization, average utilization and under utilization. Average capacity utilization ranges between 80 percent and 125 percent, with utilization below 80 percent and including and over 125 percent representing under utilization and over utilization, respectively. Pending additional review, schools with ratings of under utilization may indicate additional capacity is available and a rating of over utilization may indicate that a school is experiencing overcrowding.

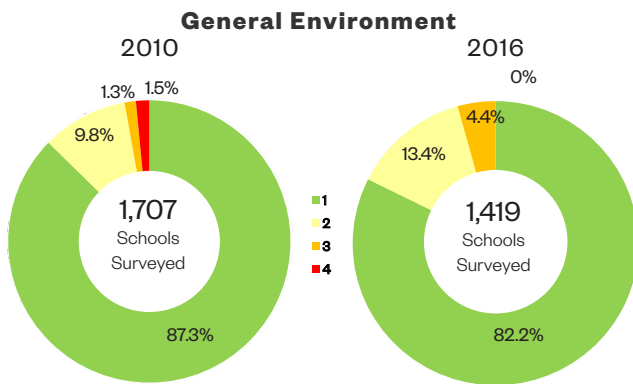

The figures below indicate a comparison of the 2016 School Survey data to the 2010 Survey:

The percentage of schools receiving a rating of 1 or 2 for building condition remained relatively constant: 84.1% in 2016 compared to 84.7% in 2010.

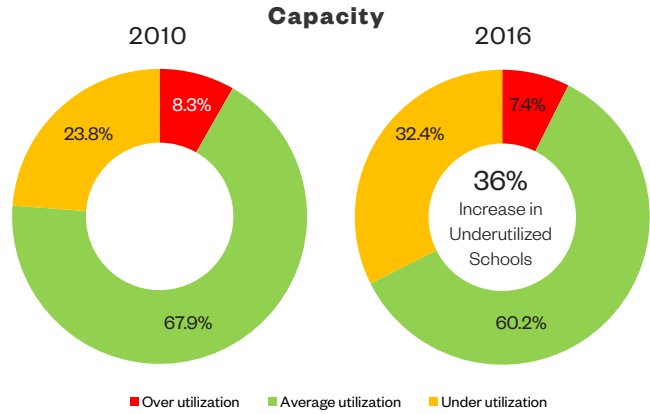

* Condition rating as reported in 2010, does not account for system degradation over time
 ** Grant program schools included as one Condition Rating

The percentage of schools receiving a rating of 1 or 2 for general environment decreased slightly from 97.1% in 2010 to 95.6% in 2016.

The percentage of schools with adequate space to support current enrollment and educational programs increased slightly from 91.7% in 2010 to 92.6% in 2016. However, there was a 36% increase in under utilized schools.

SUMMARY

The overall good condition of Massachusetts schools is due in large part to the substantial and continuing financial commitment the municipalities and the Commonwealth have made towards maintaining, building, or renovating educational space.

- The MSBA is committed to maximizing its funding up to its annual cap in grants. Since 2007, the MSBA has approved approximately \$5 billion of grants at more than 650 schools.
- Since 2007, the MSBA has supported 246 core projects (\$4.4 billion), 219 Accelerated Repair Projects (\$330 million), 189 Green Repair Projects (\$220 million), and 8 Science Lab Initiative Projects (\$60 million).
- Since 2007, the MSBA has funded 66 schools that received renovations, additions, or both. Based on the 2016 School Survey data, each of these schools has received the highest possible building condition and general environment rating of 1.
- Since 2000, 58.8% of the approximately 173 million existing square feet of school facility space is new or renovated. This is a total derived from 33% from 2000 to 2010 and 25.8% from 2011 to 2017.
- Since 2007, MSBA has worked or is currently working on core program projects with 14% of the 1,707 schools surveyed in 2010.
- While much progress has been made, there is still work to be done: 270 schools or 19% of the 1,419 schools assessed received a 3 or 4 rating for building condition, meaning they require either moderate to extensive renovation or are in poor conditions that will need to be addressed in the near future.

INTRODUCTION

MSBA HISTORY AND PURPOSE

The MSBA is a quasi-independent government authority created in 2004 by the Legislature to reform the process of funding capital improvement projects in the Commonwealth's public schools. **Our mission is to partner with Massachusetts communities to support the design and construction of educationally-appropriate, flexible, sustainable, and cost-effective public school facilities.**

The MSBA, which has a dedicated revenue stream of one penny of the state's 6.25-percent sales tax, collaborates with municipalities to equitably invest in finding the right-sized, most fiscally responsible and educationally appropriate solutions to create safe, sound, and sustainable learning environments.

MSBA ACCOMPLISHMENTS

Since 2007, the MSBA has supported 246 core projects (\$4.4 billion), 219 Accelerated Repair Projects (\$330 million), 189 Green Repair Projects (\$220 million), and 8 Science Lab Initiative Projects (\$60 million). To address the varying needs of school districts, the MSBA has worked to provide a number of programs and opportunities including the Accelerated Repair Program, Commissioning, Green Schools, IT Loan Program, Model School Program, and Science Lab Initiative.

 **788 PROJECTS AUDITED**

from our **INHERITED BACKLOG**
The MSBA has completed all 788 final audits inherited from the former program, totaling \$18 billion in submitted costs.

 **12.7 BILLION**
in **PAYMENTS MADE**
More than \$12.7 billion paid to cities, towns, and regional school districts

 **600 PROJECTS**

in our **GRANT PROGRAM**
The MSBA has over 600 projects across the Commonwealth currently in our grant program.

 **600,000**
STUDENTS BENEFIT
600,000 of the 957,000 students enrolled in the Massachusetts public school system have benefited from MSBA funding.

 **95,000**
JOBS CREATED

Since 2005, MSBA spending led to the creation of nearly 95,000 jobs and generated \$4.5 billion in total employment earnings.

 **18 BILLION**
 **AUDITED**

The MSBA has diligently audited project costs of \$18 billion.

ACCELERATED REPAIR PROGRAM

As a result of the lessons learned from the Green Repair Program, the MSBA instituted the Accelerated Repair Program (“ARP”) as part of its ongoing repair grant process. ARP is primarily for the repair or replacement of roofs, windows/doors, and/or boilers in school buildings otherwise found to be appropriate for educational use. ARP focuses on the preservation of existing assets by performing energy-efficient and cost-saving upgrades, which result in direct operational savings for school districts. In order to maximize the benefit of ARP, districts are required to use pre-selected consultants. In addition, districts are required to appropriate local funding quickly in order to adhere to an accelerated project schedule.

ARP Window Project at Barrett Russell School, Brockton

REPAIR PROGRAM	DISTRICTS	SCHOOLS	TOTAL PROJECT COSTS	MAXIMUM FACILITY GRANTS
2016 Accelerated	28	48	\$156,598,234	\$83,007,586
2015 Accelerated	24	43	\$136,680,652	\$91,974,052
2014 Accelerated	34	47	\$108,410,084	\$65,388,035
2013 Accelerated	25	45	\$94,650,790	\$54,662,551
2012 Accelerated	24	36	\$63,009,653	\$38,267,952
2010-2011 Green	93	189	\$366,647,226	\$222,889,218

COMMISSIONING

Building commissioning is a quality-focused process of verification of all building systems, subsystems, and envelope by an independent third party. The MSBA requires and pays 100% of costs for building commissioning for all MSBA-funded projects. MSBA-commissioned buildings undergo an intensive quality assurance process that begins during design and continues through construction, occupancy, and initial operations. Commissioning ensures that the new building operates as designed and as the owner intended. Commissioning also prepares the building staff to operate and maintain building systems and equipment by ensuring that district personnel receive appropriate training along with operations and maintenance manuals from equipment manufacturers and installation contractors.

Window Testing for ARP project at Union Hill School, Worcester

BENEFITS OF COMMISSIONING FOR THE DISTRICT INCLUDE

- Construction cost savings
- Improved coordination between design, construction, and occupancy
- Fewer system deficiencies at building turnover
- Improved system and equipment function
- Improved building operation and maintenance
- Lower utility bills through energy savings
- Improved indoor environmental quality and occupant comfort

GREEN SCHOOLS

The MSBA's Green Schools Program provides incentives to a district to increase the energy efficiency and sustainability for new construction and major renovation/addition projects, by exceeding Massachusetts Energy base code by 20% for 2 additional reimbursement points. All projects are required to register for the most recent version of LEED-S or NE-CHPS and exceed Massachusetts Energy base code by 10%. The MSBA monitors the effectiveness of its sustainable policies in comparison to building codes, updates policies regularly, and makes recommendations for improvement. An emphasis on energy and cost savings results in direct operational savings for school districts.

As of April 2017, 132 Core Program projects have registered with either the Collaborative for High Performance Schools or United States Green Building Council, with 86 of the 132 projects completed. The total additional reimbursement from the MSBA through this program to date is roughly \$115 million, averaging over a million dollars per project. Although the MSBA's sustainable design policy emphasizes increased energy efficiencies, it also supports more efficient transportation costs, lower water consumption, reduced use of materials, and encourages a high-quality educational indoor environment.

Bancroft Elementary School, Andover

IT LOAN PROGRAM

In fiscal year 2017, the MSBA's Board of Directors approved the establishment of a Public School Information Technology Loan Program ("IT Loan Program"). The MSBA IT Loan Program will provide loans for public schools across the Commonwealth to support the student experience through the use of enhanced technology and increased broadband access. The MSBA IT Loan Program will be working in collaboration with an existing information technology grant program, the Digital Connections Partnership Schools Grant ("DCPSG") program, that is currently being managed by the Department of Elementary and Secondary Education ("DESE") and the Massachusetts Office of Information Technology ("MassIT").

Through a collaborative effort across the agencies, the MSBA IT Loan Program will have \$50 million available over a five year period. Loans will be given to approved districts, with funding up to a maximum of \$2.5 million per district. Loans will be available to pay for IT infrastructure on the basis of need as determined by DESE, with the total cost of procuring and installing the equipment determined by MassIT.

MODEL SCHOOL PROGRAM

The Model School Program seeks to effectively adapt and re-use the design of successful, recently constructed pre-K through 12th grade schools. Model Schools are efficient in design and are easy to maintain, contain optimal classroom and science lab space, can easily accommodate moderately higher or lower enrollments, incorporate sustainable design elements when possible, and are flexible in educational programming spaces while encouraging community use.

The MSBA's Model School Task Force has recently reviewed and updated the Model School Procedures, and since 2016, the MSBA has carried out two procurements to update the list of Board-approved Model Schools.

Freeman-Kennedy Elementary School, Norfolk

SCIENCE LAB INITIATIVE

In connection with the MSBA's Guidelines for Science Labs in High School Facilities, the MSBA launched its \$60 million Science Laboratory Initiative in 2011. In order to further recognize the importance of these educational spaces, the MSBA utilized the remaining allocation of Qualified School Construction Bond proceeds to provide a portion of the funding for the \$60 million Science Lab Initiative. Districts that had deficiencies in their existing science labs, which inhibited the delivery of the district's educational program, had the opportunity to express interest in the MSBA's Science Lab Initiative through the Fiscal Year 2012 Statement of Interest process.

The Science Lab Initiative represents a creative use of the MSBA's limited resources and serves as another example by which the MSBA maximizes the benefit of funding for school projects while enhancing the education of students. This program facilitated the delivery of a 21st century science curriculum and enhanced the learning environment for students across the Commonwealth.

THE 2016 SURVEY

Preparation for the 2016 Survey

Consistent with the MSBA's statutory mandates in Chapter 70B, the MSBA conducts periodic School Surveys in order to understand the conditions of public schools in Massachusetts and to inform the MSBA's grant program. Three surveys have been completed to date: in 2006, 2010, and 2016. In 2006, the MSBA completed the initial survey, which helped to create the first centralized database of school building data and establish the baseline facilities conditions at more than 1,800 schools. In 2010, the survey verified, updated, and supplemented the data collected in 2006. The 2016 School Survey will again verify, update, and expand the database.

Survey Process

As an enhancement to the assessment process in 2016, data was collected and recorded directly on a tablet device, which eliminated the need for paper forms and off-site data entry. As was done in 2010, the data was synchronized with the central production database each day. The mobile collection tool had a number of benefits:

- Basic data was pre-populated into the tablet software to reduce on-site data entry and error potential;
- The elimination of paper forms reduced potential for human error and streamlined production;
- Data entry and initial QA/QC were completed while the assessor was on-site and familiar with the details of each individual school; and,
- The tablet was configured with improved photo capture capability to optimize the process for capturing and tagging photos.

Data collection was carried out by a team of 15 design and engineering professionals. These assessors were from diverse professional backgrounds, each with experience in facility design, construction, and condition assessment. To assure consistent and accurate data collection, assessors underwent a week long training program comprised of classroom work and field experiences. The classroom portion included several workshops on the use of the data collection tool, collection protocols (business rules), technical instruction, and standards for data collection and recording. Field training was conducted at four schools across two districts representing a cross section of school types, ages, and conditions. Field training incorporated group exercises and supervised individual exercises to confirm that assessors were prepared and functioning at a consistent level.

A typical school survey begins with an initial 30-minute interview with the principal and facilities personnel to

collect and/or confirm basic information about the school such as its age, number of floors, and grades served. Assessors use a floor plan provided by the school to document the current use of each classroom space. They gather basic information on classroom counts and utilization to gain a general understanding of how the spaces within the building are utilized in the delivery of the district's educational plan.

After the initial interview, the assessor and district representatives tour the facility to observe the use and condition of all major spaces and systems on each floor, including typical classrooms, science demonstration/labs, gyms, libraries, cafeterias, boiler rooms, and other facility support spaces. The survey concludes with the assessor taking a tour of the site to observe the exterior façade of the building and general site conditions.

2016 Survey Period

The data collection team worked in six regional planning areas to break the 330 districts assessed into manageable areas. A team of schedulers contacted the districts in advance of the surveys to establish survey schedules, review questions to be answered during the surveys, and establish points of contact.

There are 1,859 public schools in the Commonwealth. The teams collected data for 1,419 schools from September through December 2016. The following categories, totaling 440 schools, were excluded from the surveys:

- Projects in the grant program, underway or completed with the MSBA since 2007 and waitlist projects substantially complete after 2000 with very good building condition ratings from the 2010 survey (276)
- So-called "schools within a school"
- Schools excluded from MSBA funding including: pre-K only schools, Commonwealth charter schools, institutional schools, schools located in rented or leased buildings, and schools located in Department of Defense sites (153)
- Horace Mann charter schools identified after the assessment period (2)

Throughout the process, a Senior Discipline Specialist made spot visits with the assessors to observe their field work. Each assessor was evaluated three times throughout the course of the surveys with the first taking place within their first 24 surveys. Schedules were designed for Monday through Thursday in the field, with Fridays reserved for a morning QA/QC check, a project status call, any QA/QC follow-up work, and preparations for the next week.

Scoring

A detailed scoring methodology was developed to calculate comparative ratings for each school in three categories:

- Building Condition
- General Environment
- Capacity Utilization

Prior to assessing the schools in 2016, existing categories and data from the 2010 survey were evaluated. It was determined that for some categories, minor changes to the evaluation criteria would better capture the conditions and respond to how the MSBA uses the data.

- The Building Condition category evaluates seven site and eighteen building systems. It remains substantially unchanged from the 2010 survey.
- The General Environment category in 2010 was distributed into three distinct tiers of priority:
 - Tier 1- Learning Environment
 - Tier 2- Core Areas, Maintenance, and Capacity
 - Tier 3- Rooms, Technology, Accessibility, and Security.

For the 2016 survey, the priorities were revised and re-weighted to capture a wider spectrum of relevant criteria. The 2016 survey utilized six sub-categories:

- Learning Environment
- Building Safety
- Universal Accessibility
- Academic Sufficiency
- Program Sufficiency
- Instructional Technology
- The 2016 School Survey's Capacity Rating is directly based on each school's Capacity Utilization, a measure of student enrollment divided by the building's capacity. Capacity was objectively calculated for each school using a consistent operational model which factors in classroom design capacity, grade level utilization, area adjustments, and other factors. This model is closely aligned with MSBA facility design standards. Similar to the 2010 Survey, each school falls into one of three rating categories:
 - Under Utilization (less than 80% capacity utilization)
 - Average Utilization (between 80% and 125% capacity utilization)
 - Over Utilization (equal to or greater than 125% capacity utilization)

Capacity indicators such as square feet per student were not factored into the Capacity Rating in 2016, as these have varying impacts depending on each school's design.

STATEWIDE SCHOOL FACILITIES & FINDINGS

BASIC SCHOOL DATA

School Type

There are 65 variations of grade configurations of schools across the Commonwealth. The following general school types were developed from the grades served:

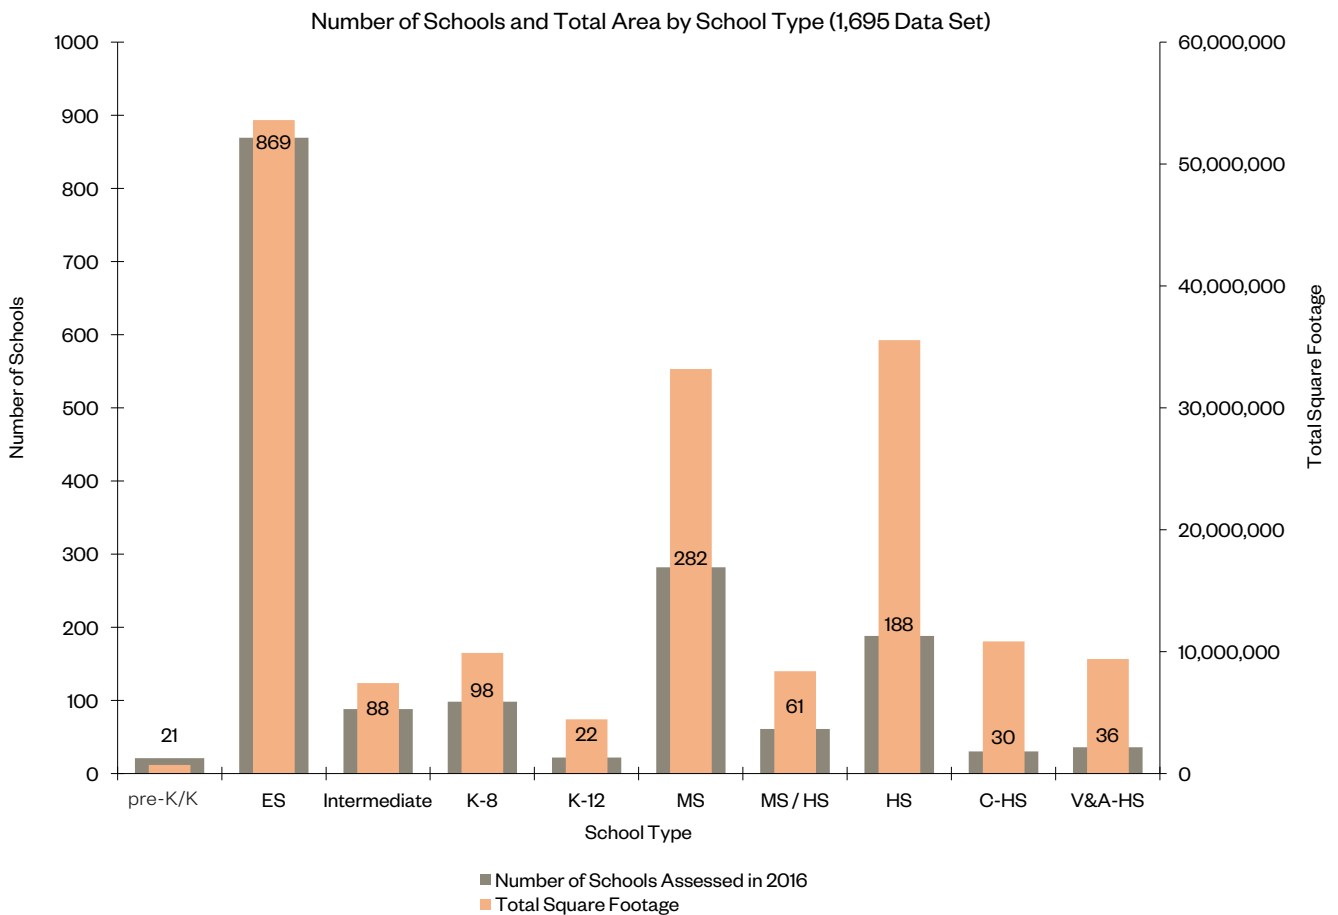

TYPE	ABBREVIATION	DESCRIPTION
Pre-K / K Centers	pre-K / K	Schools with pre-Kindergarten and/or Kindergarten students
Elementary Schools	ES	Kindergarten through 6th grade
Intermediate Schools	Intermediate, Int	3rd through 6th grades
K-8 Schools	K-8	Kindergarten through 8th grade
K-12 Schools	K-12	Kindergarten through 12th grade
Middle Schools	MS	6th through 8th grade
Middle/High Schools	MS/HS	6th through 12th grade
General High Schools	HS	9th through 12th grade
Comprehensive High Schools	C-HS	9th through 12th grade at Comprehensive High Schools
Vocational and Agricultural High Schools	V&A-HS	9th through 12th grade at Vocational and Agriculture Schools

Number of Schools and Total Square Footage

There are 1,859 public schools in the Commonwealth, which includes pre-Kindergarten only facilities, Horace Mann and Commonwealth charter schools, institutional schools and schools in rented, Department of Defense or leased facilities. Of these, 1,697 schools housing public school students grades K to 12 are eligible for MSBA funding and 1695 were evaluated for this report. These 1,695 active schools are composed of 1,773 school-related permanent buildings totaling 173,508,438 Gross Square Feet (GSF) that support 886,074 students in 330 school districts (including 58 regional school districts and 29 vocational and agricultural school districts). Elementary schools make up the largest number of public school buildings (869).

A review of the 1,419 schools assessed in 2016 indicates that there is little evidence of widespread overcrowding. Most of the space needs for Massachusetts schools are being met through the use of permanent school facility space. Approximately 1.2%, of the assessed classrooms in the Commonwealth are in temporary spaces.

- 605 out of more than 48,348 total assessed classrooms are located in temporary spaces (1.2%).
- 98 schools, 7% of the state's assessed public K-12 facilities, have more than 10% of their classroom space in temporary spaces.

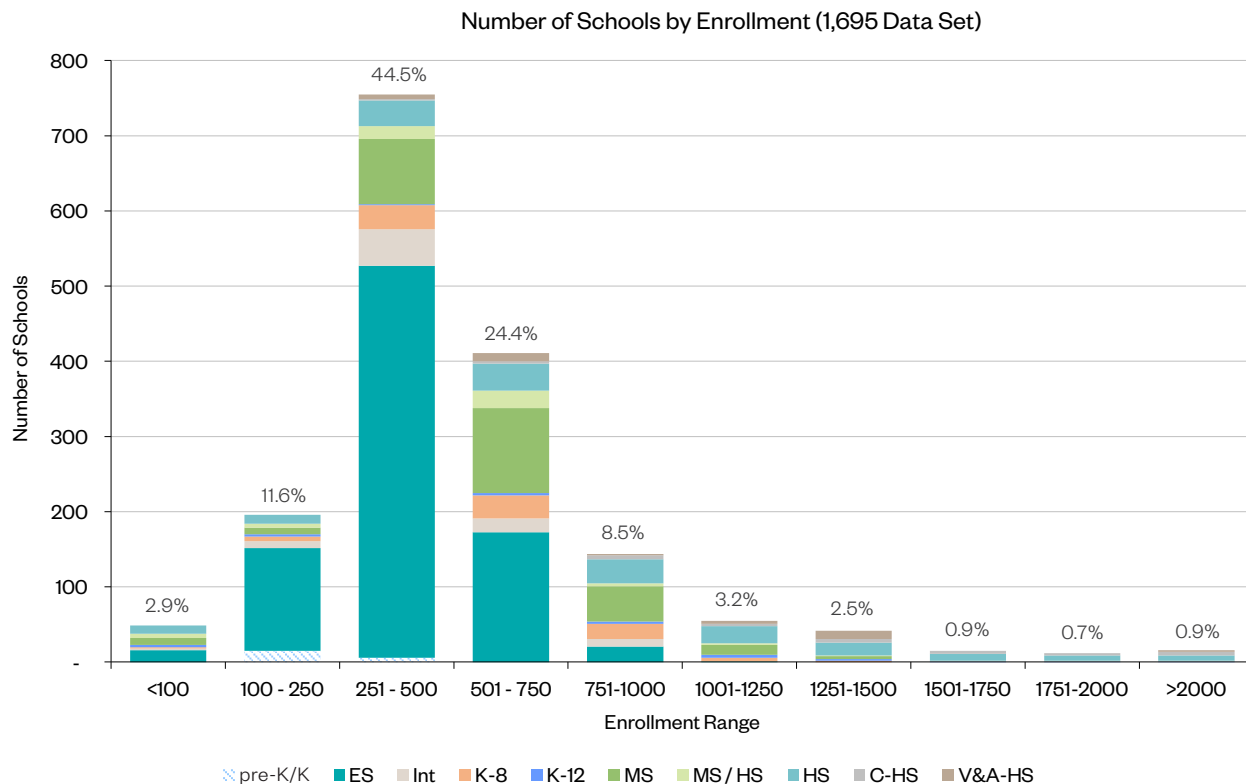

Buildings & Square Footage Examined in 2016 Assessment

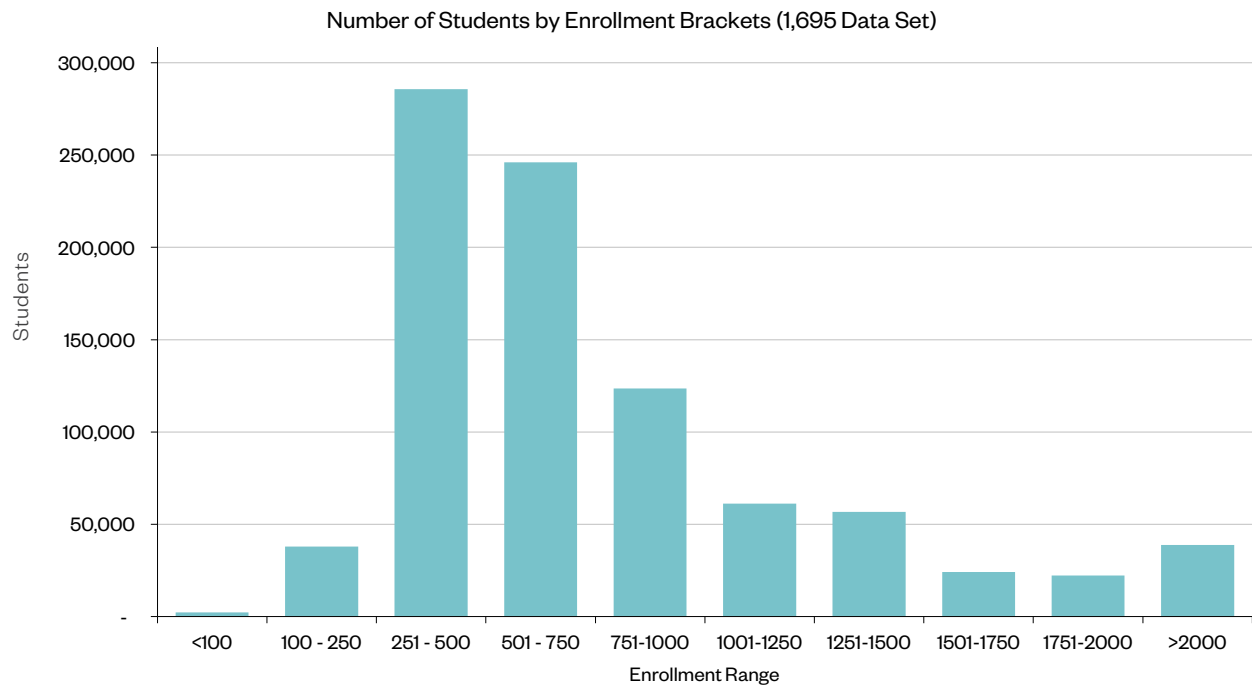

SCHOOL TYPE	# OF SCHOOLS ASSESSED	# OF BUILDINGS ASSESSED	# OF SCHOOLS NOT ASSESSED	TOTAL # OF SCHOOLS	TOTAL SQUARE FOOTAGE	AVERAGE AREA

V&A-HS	29	62	7	36	9,382,813	260,634
Total	1,419	1,497	276	1,695	173,508,438	102,334

Size Range

Approximately 59% of public schools in the Commonwealth have an enrollment of 500 or fewer students. Approximately 83% have 750 or fewer students, approximately 8.5% have from 751 to 1000 students, and less than 8.4% have 1,001 students or more.

The graphs below state the number and percentage of schools in Massachusetts by size of enrollment:

Age of Schools

Schools in Massachusetts have been built over nearly a 200-year period, with a majority of schools being built after 1880.

- 58.8% of the approximately 173 million square feet has been built new or renovated since 2000.
- 25.8% of that has been built new or renovated between 2011 and 2017.
- 131 or 8% are more than 100 years old. Of these, 16 are in the MSBA's grant program.

SCHOOL RATING SUMMARY

Facilities information gathered for each school includes gross square footage, age, building conditions, construction and renovation history, numbers and types of classrooms, and availability of core spaces. This information is explored in more depth in the following pages.

Overall, Massachusetts schools and school buildings performed well in the primary scoring rubrics, which rated building condition, the general environment, and capacity utilization.

The building condition rating is an overall score for the general condition of a school facility's major systems, such as roofing, HVAC, windows, and flooring. The building condition rating is on a scale of 1 to 4, with a rating of 1 indicating the best conditions and a 4 indicating the poorest. The 1 to 4 ratings are derived from the building's facility condition index, which is an evaluation of the site and building systems on a 100% scale.

RATING	DESCRIPTION	POTENTIAL FUTURE ACTION	BUILDING FACILITY CONDITION INDEX
1	The building is in good condition with few or no building systems needing attention.	General Maintenance	<24.5%
2	The building is in generally good condition with a few building systems that may need some attention.	Minor Repair or Renovation	>=24.5% and <39.5%
3	The building is in fair to poor condition with some building systems needing repair or replacement	Moderate Repair or Renovation	>= 39.5% and <59.5%
4	The building is in poor condition with many building systems requiring attention, and further study to determine the extent of renovations or potential replacement.	Major Renovation or Potential Replacement	>=59.5%

The general environment rating is also based on a 1 to 4 scale and reflects the school building's learning environment, building safety, universal accessibility, academic sufficiency, program sufficiency, and instructional technology. For 2016, more emphasis was placed on gathering technology and security data.

RATING	DESCRIPTION	GENERAL ENVIRONMENT SCORE
1	The school's general environment is good and is conducive to teaching and learning.	<24.5%
2	The school's general environment is good, but a few conditions may make learning and teaching less than ideal.	>=24.5% and <39.5%
3	The school's general environment is fair with multiple conditions that may negatively affect learning and teaching.	>= 39.5% and <59.5%
4	The school's general environment is poor and many conditions present obstacles to learning and teaching.	>=59.5%

Capacity utilization at individual schools was rated based on comparisons to statewide norms. Each school building received an Over Utilization, Average Utilization, or Under Utilization score.

The criteria for each rating will be discussed in more detail in the sections that follow as well as in the following table.

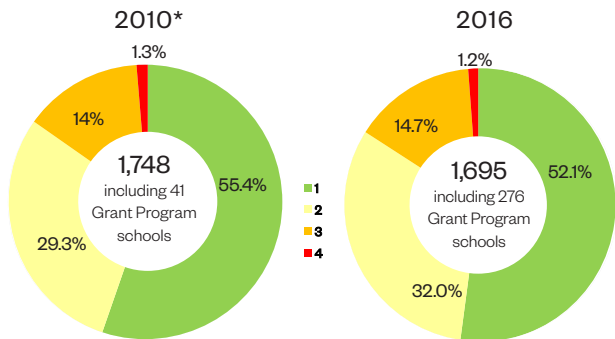

RATING	DESCRIPTION	CAPACITY UTILIZATION
Over Utilization	School facilities may not be adequately sized for the current enrollment and educational program.	>=125
Average Utilization	School facilities appear to be adequately sized for the current enrollment and educational program.	>=80 and <125
Under Utilization	School facilities may exceed the size necessary to house the current enrollment and educational program.	<80

BUILDING CONDITION

Schools in Massachusetts are in generally good condition. As shown in Building Condition Chart 1:

- 84.1% of Massachusetts schools received a building condition rating of 1 or 2, meaning that their site and building systems are in generally good condition, with few building systems that may need attention.
- Fewer than 1.2% of schools in the Commonwealth, or 20 schools, received a building condition rating of 4, meaning that they are in poor condition. One school rated a 4 in 2010 received a rating of 4 in 2016.
- 14.7% of schools received an overall building conditions rating of 3, meaning that they may require a moderate to extensive renovation to address the physical deficiencies at those facilities.

Building Condition Chart 1**

* Condition rating as reported in 2010, does not account for system degradation over time

** Grant Program schools included as 1 Condition Rating

Although the data indicates that schools are in generally good condition, without continued capital expenditures, building conditions and systems continue to degrade, even with proper maintenance, due to the aging of the facility. To further understand the comparison of the survey data between 2010 and 2016 and the potential impact to the building conditions if no investments had been made, an industry standard school facility degradation factor of 2% per year was applied to the building conditions for the schools surveyed in 2010 to account for natural system degradation over the six years since the last survey. Applying the degradation factor, the data on the left of Chart 2, shows what the expected school ratings in 2016 would be if no work had been done on schools. The 2016 survey data on the right side of Chart 2 indicates that there are 34% more schools with ratings of 1's and 2's than would be expected demonstrating the importance of continued capital investments.

Building Condition Chart 2**

* Condition ratings adjusted for expected system degradation since 2010

** Grant Program schools included as 1 Condition Rating

Building Condition Evaluation Criteria

Similar to the 2010 survey, a major component of the 2016 School Survey was an assessment of the general conditions of selected site and building systems. In 2010 and 2016, the survey tool was used to rate each of the seven site and eighteen building systems, and gather information on observed conditions. A few of the building systems assessed were changed from 2010 based on MSBA experience of what data is useful and necessary. Changes to the building condition assessment include:

- Site fencing was removed from the general condition assessment.
- Site and building accessibility was relocated from the general condition assessment and is now captured as part of the General Environment data collection.
- Technology was relocated and is now captured as part of the General Environment data collection.
- Water supply was added.
- Septic, sewage, and wastewater disposal systems were added.
- Fire suppression was given its own rating.
- Elevators and lifts were given their own rating.

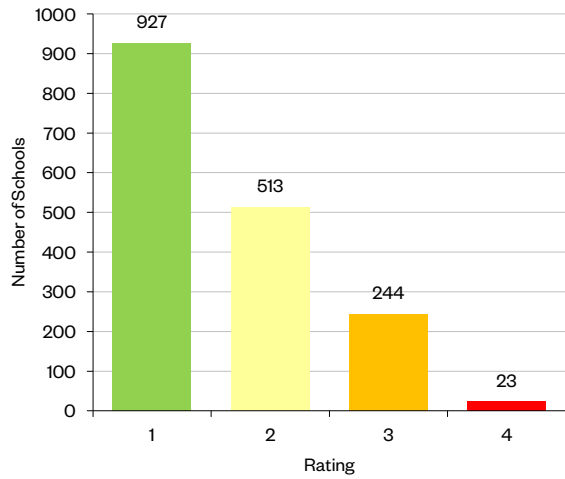

See Appendix I for full list of systems assessed.

The survey tool used standardized data collection questions and techniques to ensure that the data is consistent and accurate. An overall building score is generated based on the observations of the assessor, information provided by the district, and the ratings for the individual systems listed in Appendix I.

First-hand information was obtained by the assessor whenever possible. If a system was not visible at a particular school, the system condition assessment was provided by the school or district representative. The 2016 School Survey is not a comprehensive facilities assessment; rather, it is a survey to gather general data on major building systems and site conditions.

The following charts and table compare the building condition ratings between the 2010 and 2016 surveys.

Number of Schools by Building Systems Condition Rating in 2010 (1,707 Data Set)*

Number of Schools by Building Systems Condition Rating in 2016 (1,419 Data Set)*

*As noted, since 2007, the MSBA has worked or is currently working with 246 core program projects which accounts for fewer buildings (1,707 vs 1,419) requiring site assessments in 2016.

GENERAL ENVIRONMENT

Schools were evaluated based on criteria that affect the learning environment. Due to the number of assessments and the timeline for the survey, the scope of the MSBA's surveys has not included an educational program assessment. As part of its due diligence for the Statement of Interest application process, the MSBA looks to further understand the facility's condition to offer the district's educational program. In 2010 the General Environment (GE) score utilized three groups (tiers) of data. Tier 1 included data concerning the natural daylight, size of classrooms, open floor plan, and building condition. Tier 2 included data on core areas, maintenance, and capacity. Tier 3 included data on the existence of rooms, technology, accessibility, and security. The same fundamental concept was used for the 2016 survey. Categories were further refined to better quantify the attributes that make an appropriate and healthy school environment that facilitates learning.

For 2016 the General Environment scoring was distributed into 6 categories:

- Learning Environment
- Building Safety
- Universal Accessibility
- Academic Sufficiency
- Program Sufficiency
- Instructional Technology.

Each of these categories was broken into subcategories for which data was gathered.

Learning Environment: the space and educational quality (natural light, open floor plan, and restroom availability), the building condition rating, and the cleanliness and maintenance.

Building Safety: school security (surveillance cameras, alarms, detectors, security staff, communications, site lighting) and fire life safety (fire alarm and fire suppression ratings).

Universal Accessibility: site accessibility (designated parking stall and access to site and playgrounds) and building accessibility (accessible entrances, accessible floors, and accessible bathrooms) for both ambulatory and nonambulatory users.

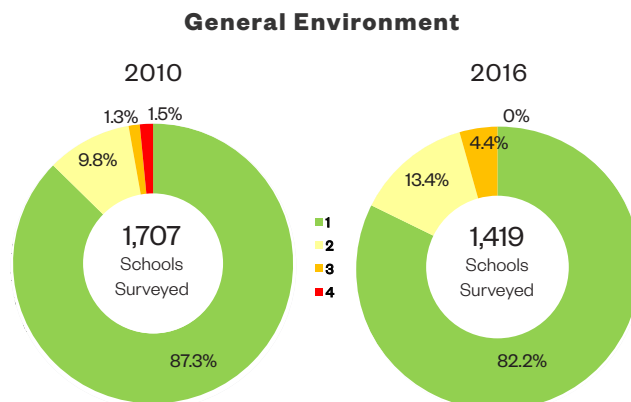

Academic Sufficiency: capacity score based upon the number of academic classrooms for the enrollment and the number of modular classrooms.

Program Sufficiency: presence of specialized rooms (science, art, music, computer lab, vocational shops, vocational classrooms) and presence of core spaces (library, gym, cafeteria, and auditorium).

Instructional Technology: internet access (Wide Area Network and Local Area Network capabilities, fiber connection, and data capacity per student), cable/Wi-Fi Extent (percentage of classrooms with cabling or wireless and core areas wireless), power infrastructure (electrical distribution rating and electrical capacity), classroom technology (device to student ratios, ability to conduct testing, classrooms with display technologies).

Each of the data elements was scored based on varying factors including if the element is currently available or not, if the element is provided as prescribed, if the element met the required criteria, etc. These scores were then totaled in the subcategories, which have their own weighting of the overall category score. These subcategories were then totaled into the overall categories, which have their own overall percentage of the final General Environment Score.

The 2016 School Survey indicates that approximately 95.6% of schools received a general environment rating of 1 or 2, meaning they provide an adequate physical environment in which to teach and learn. Schools that receive a 1 or 2 have access to daylight in most or all of their classes, adequately-sized classrooms, appropriate core spaces for the enrollment, proper maintenance, access to technology, and few physical barriers for individuals with physical disabilities. In the 2010 survey, approximately 97% of schools received a general environment rating of 1 or 2.

The 2016 School Survey indicates that 0% of schools have a general environment rating of 4, meaning that the overall physical environment is poor and may present obstacles to teaching and learning. In the 2010 survey, about 1.5% of schools, or 26 schools, received a rating of 4.

In 2016, about 4.4% of schools, or 62 schools, received a rating of 3, which means that their physical environment is not sufficient and may be negatively affecting teaching and learning. In 2010, about 1.3% of schools, or 22 schools, received a rating of 3.

4	26	1.5%	0	0%
Total	1,707		1,419	

General Environment Evaluation Criteria

Schools were evaluated based on conditions that affect the physical learning environment. During the site visits assessors collected the following data:

Classrooms without natural light: Some Massachusetts schools have been constructed with a high percentage of interior classrooms that lack views to the outside. Recent studies indicate that classrooms without natural light may negatively affect the ability of students to learn.

Open floor plans: Many schools built in the 1970's were constructed as open floor plan schools that lacked walls to separate classrooms. The intentions and implementation of teaching methods for open floor plan school design were to promote interactive, team-based learning. However, in practice the buildings generally did not provide effective learning environments because both teachers and students were distracted by the amount of activity occurring around them. Although many of these schools have been replaced or renovated to provide separate classroom spaces, 66 schools remain in the Commonwealth with at least partially open floor plans.

Building Condition: The physical structure that the students attend each day is an important factor in a good learning environment. A poor building condition can be distracting or in some cases a health or safety risk. A dilapidated condition is often a sign of larger maintenance issues which, if not addressed, can create long-term facility deficiencies.

Maintenance: Clean and properly maintained schools provide quality physical environments for students and teachers.

Security: Schools should provide a safe environment for learning. Both active and passive strategies should be incorporated in schools including minimizing spaces hidden from view, security camera use, appropriately locked school entrances, and metal detectors for certain applications. Safety is necessary to encourage a healthy learning environment.

Fire and Life safety: Designing facilities with access to appropriate means of egress, providing fire protection systems including fire extinguishers and fire alarms, and sprinkler systems can all create a safe environment for building users.

Accessibility: Classrooms, core spaces, restrooms, and play areas should be reasonably accessible to both ambulatory and nonambulatory students, faculty, staff and parents.

Capacity: Schools should be enrolled at or below capacity for a proper learning environment. Schools that are over capacity may indicate a large number of students per classroom and inadequate facilities for the student population.

Special classrooms: Dedicated science, technology, art, music, vocational, and special needs classrooms provide better learning spaces for students and teachers.

Core areas: Schools should have libraries, gymnasiums, and cafeterias that are appropriately-sized for the school's grade configuration and student population.

Technology: Access to the internet, classroom computers, power infrastructure and other modern technological equipment allows students and teachers to expand learning resources.

The chart below breaks down the 2016 survey ratings by school type.

General Environment Rating 2016	pre-K/ K	ES	Int	K-8	K-12	MS	MS / HS	HS	C-HS	V&A-HS	Total
1	13 76%	579 76%	60 83%	76 84%	14 82%	215 94%	42 88%	123 88%	17 94%	28 97%	1,167 82%
2	4 24%	132 17%	11 15%	11 12%	2 12%	12 5%	5 10%	12 9%		1 3%	190 13%
3		49 6%	1 1%	3 3%	1 6%	2 1%	1 2%	4 3%	1 6%		62 4%
Total	17 100%	760 100%	72 100%	90 100%	17 100%	229 100%	48 100%	139 100%	18 100%	29 100%	1,419 100%

Specialized Areas

Most school facilities include specialized spaces for science demonstration/labs, art, and music.

The table on the next page reflects the number of classrooms dedicated for science, art, and music, as well as the number of science demonstration/labs. This number does not include classrooms that may be used for multiple purposes. It only includes those classrooms dedicated exclusively to science, art, or music.

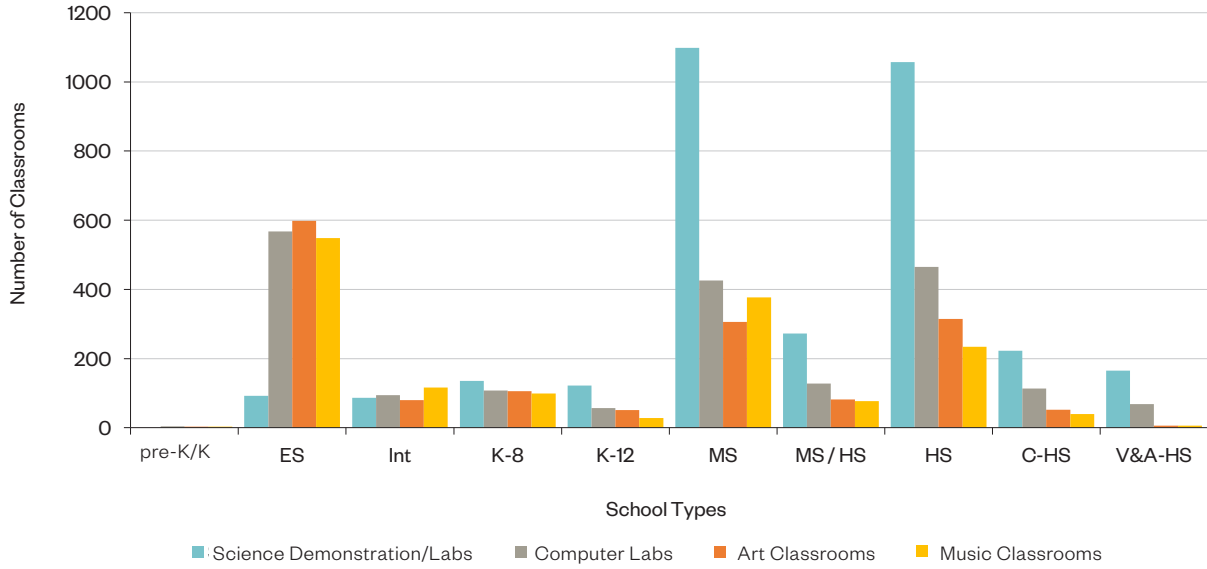

The 2016 School Survey data reveals that the majority of high schools and upper grade level schools maintain dedicated space for science, art, and music, while the elementary schools tend to have more art and music space and relatively less space for science. Overall, the majority of schools contain or have access to specialized spaces that are appropriate for the grades served.

- Elementary schools should have art and music rooms
 - 78% of elementary schools have art rooms
 - 64% of elementary schools have music rooms*
 - 61% of elementary schools have both an art and a music classroom
 - 19% of elementary schools have neither an art nor music classroom

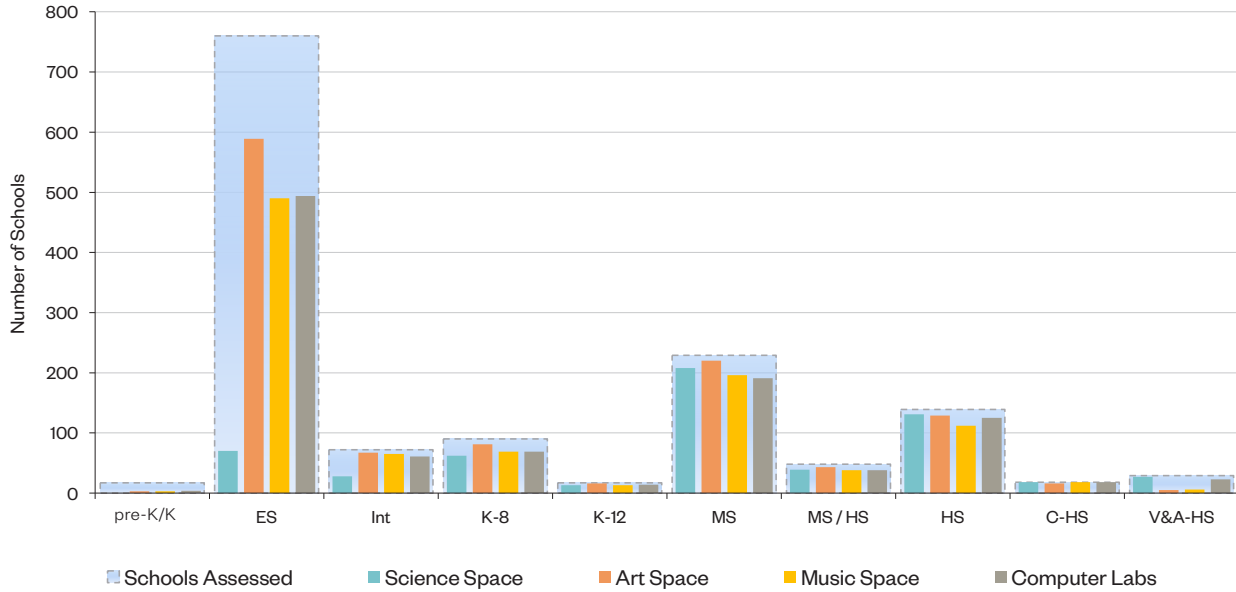

- Middle schools should have art, music, and science demonstration/labs
 - 96% of middle schools have art rooms
 - 86% of middle schools have music rooms
 - 91% of middle schools have science demonstration/labs
- High schools should have art, music, and science demonstration/labs
 - 93% of high schools have art rooms
 - 81% of high schools have music rooms
 - 94% of high schools have science demonstration/labs

*Rooms that shared art and music were classified as art rooms which can account for a portion of the fewer music rooms.

Specialized Classrooms by School Type (1,419 Data Set)

Schools with Access to Specialized Spaces (1,419 Data Set)

Special Education

With the exception of certain alternative educational facilities, the majority of schools use a combination of inclusive classrooms and self-contained special education spaces to teach students with individual education program needs. In addition, 273 school districts belong to special education collaboratives that allow multiple districts to pool resources to address the needs of students who require the highest levels of care. For the 1,419 schools assessed across the state, public schools have dedicated a combined total of 241 classrooms for collaborative programs. Assuming an average of 750 square feet per classroom, this number represents approximately 109,000 square feet.

CAPACITY UTILIZATION

There are many factors that affect how a district utilizes its school spaces, such as enrollment, number of buildings, schedule, desired educational program, student-teacher ratio, school assignment policies, and available budgeted resources. As in the 2010 survey, the 2016 school survey looked at a broad range of factors to get a general sense of how districts are utilizing their available educational spaces. Schools were evaluated to determine if their space utilization fell outside of generally accepted normal ranges and were placed in one of three categories: Under Utilization, Average Utilization and Over Utilization.

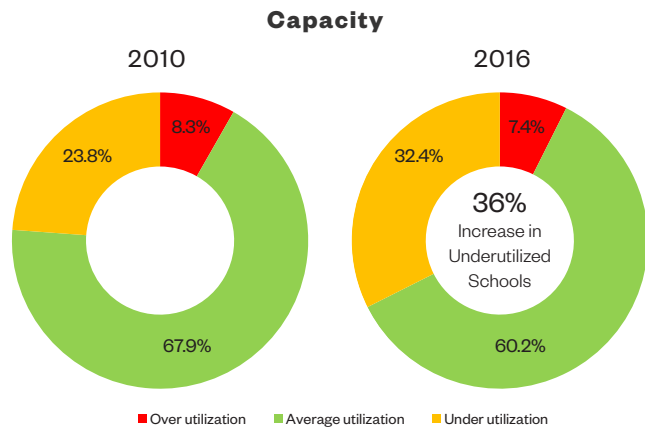

Comparing schools built across different eras is difficult; schools built in different eras were constructed using the education models, standards, code requirements and guidelines in place at the time, which may or may not align with the current trends in school construction practices. In 2010, capacity was based on gross square footage per student and the number of students per classroom. In addition, the 2010 survey evaluated several other indicators of space utilization, including: the presence of classrooms that are significantly under-sized; the use of temporary or modular classrooms; the use of non-traditional class spaces such as hallways, stages, cafeterias or storage closets; the number of lunch seatings in the cafeteria; and the original use or design of the building.

The 2016 School Survey features an enhanced measure of school capacity utilization based on an objective, consistent operational capacity model closely aligned with the current MSBA facility design standards. The 2016 school survey capacities and percent capacity utilization offer stakeholders a straightforward concept of space use with the added benefit of additional granularity of detail beneath the broad categorization of Under, Average, and Over utilization measures. Each school's Factored Capacity is calculated by adding up the sum total for all classrooms currently used for educational purposes, which is the product of three values: the Base Classroom Capacity Model, Classroom Size Adjustment factor, and a Utilization Factor. Average utilization ranges between 80 percent and 125 percent, and utilization below 80 percent and including and over 125 percent represents under and over utilization, respectively, requiring further review. For further information on classroom capacity, classroom size, and utilization factors, see Appendix III.

Given the 2016 School Survey general approach to the evaluation of space utilization, this data should not be used as a definitive determination of whether a school is over or under-utilized. Rather, each school's space utilization rating should be used as a starting

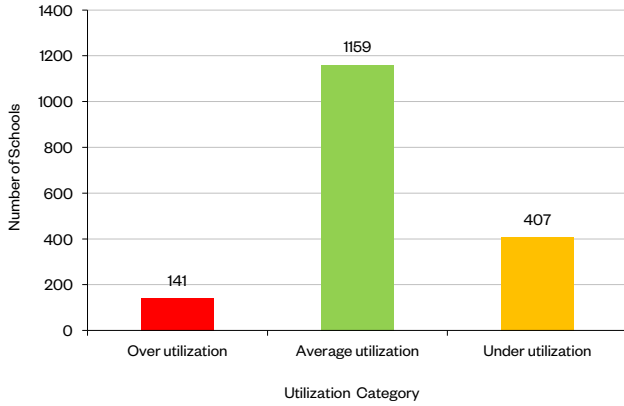

point for further discussion and analysis. Many factors impact the utilization of a school's educational spaces, including factors that the 2016 School Survey did not assess such as a district's school assignment policies, schedule, student-teacher ratios, budget constraints, and educational program requirements.

The School Survey indicates that over 60% of schools have Average Utilization ratings, meaning that the space utilization indicators discussed above fall within a normal range. About 33% of schools have Under Utilization ratings, meaning that the school does not have temporary or non-traditional classrooms and generally has a higher square footage per student and a lower student-to-classroom ratio than average. Less than 8% of schools have Over Utilization ratings, meaning that they have a high percentage of temporary and/or non-traditional classrooms, a low square footage per student, and a high student-to-classroom ratio.

As noted in the figure above and the charts and table on the following page, the utilization ratings for Over Utilization is approximately the same between 2010 and 2016. However, the 2016 School Survey indicates a higher percentage of schools with ratings of Under Utilization.

The chart above notes that a high percentage of the middle, middle/high, and high schools are under utilized.

Classrooms Not Used for the Education of Public School Students, Grades K-12

For the 1,419 schools surveyed, the assessors asked each school principal to identify classrooms used for the education of public school students, grades k to 12, during the school day and to indicate those classrooms no longer used for classroom instruction and the current usage.

Of the schools surveyed, there are more than 1,677 classrooms, representing approximately 3.4% of the Commonwealth's total classroom inventory, that were not used for education during the school day during the 2016-2017 school year. Assuming an average of 750 square feet per classroom, this number represents approximately 1.2 million square feet of classroom space that is not being used for education.

Of the 1,677 classrooms not used for the education of public school students, grades k to 12, during the school day, 12% were used for storage, 22% were used for district administration offices, and 66% were used for municipal purposes, community programs or additional educational opportunities, such as day care, youth clubs, and adult continuing education.

ENROLLMENT TRENDS⁽¹⁾

At the time of the 2010 survey report, there was a 3.3% statewide decline in K-12 public school enrollment from the 2004-2005 school year to approximately 900,500 students. Since then, enrollment declined roughly 1.6% statewide to approximately 886,000 students in 2015-2016.

DISTRICT TYPE	ENROLLMENT				
	2009-2010	2015-2016	CHANGE	CHANGE %	
Traditional	766,792	752,548	-14,244	-1.90%	
Regional	106,547	104,755	-1,792	-1.70%	
Vocational Agriculture	27,139	28,771	1,632	6%	
Total	900,478	886,074	-14,404	-1.60%	

According to K-12 enrollment data available from the Massachusetts Department of Elementary and Secondary Education, relative declines were most severe in Berkshire and Hampshire counties, with a cumulative loss of 10% (-3,472 students) since the 2009-2010 school year. Declines in the Hampden County (-3,303 students), Central (-4,642 students), Southeast (-5,455 students), Franklin County (-287 students), and Cape & Island (-1,136 students) regions were less severe at between 3% and 5%. Northeast (-2,925 students) and MetroWest (-975 students) regions posted moderate declines between 1% and 3%. In the same time period, the Greater Boston region was the only region in the Commonwealth to experience an enrollment increase of 3.4% (+7,791 students).

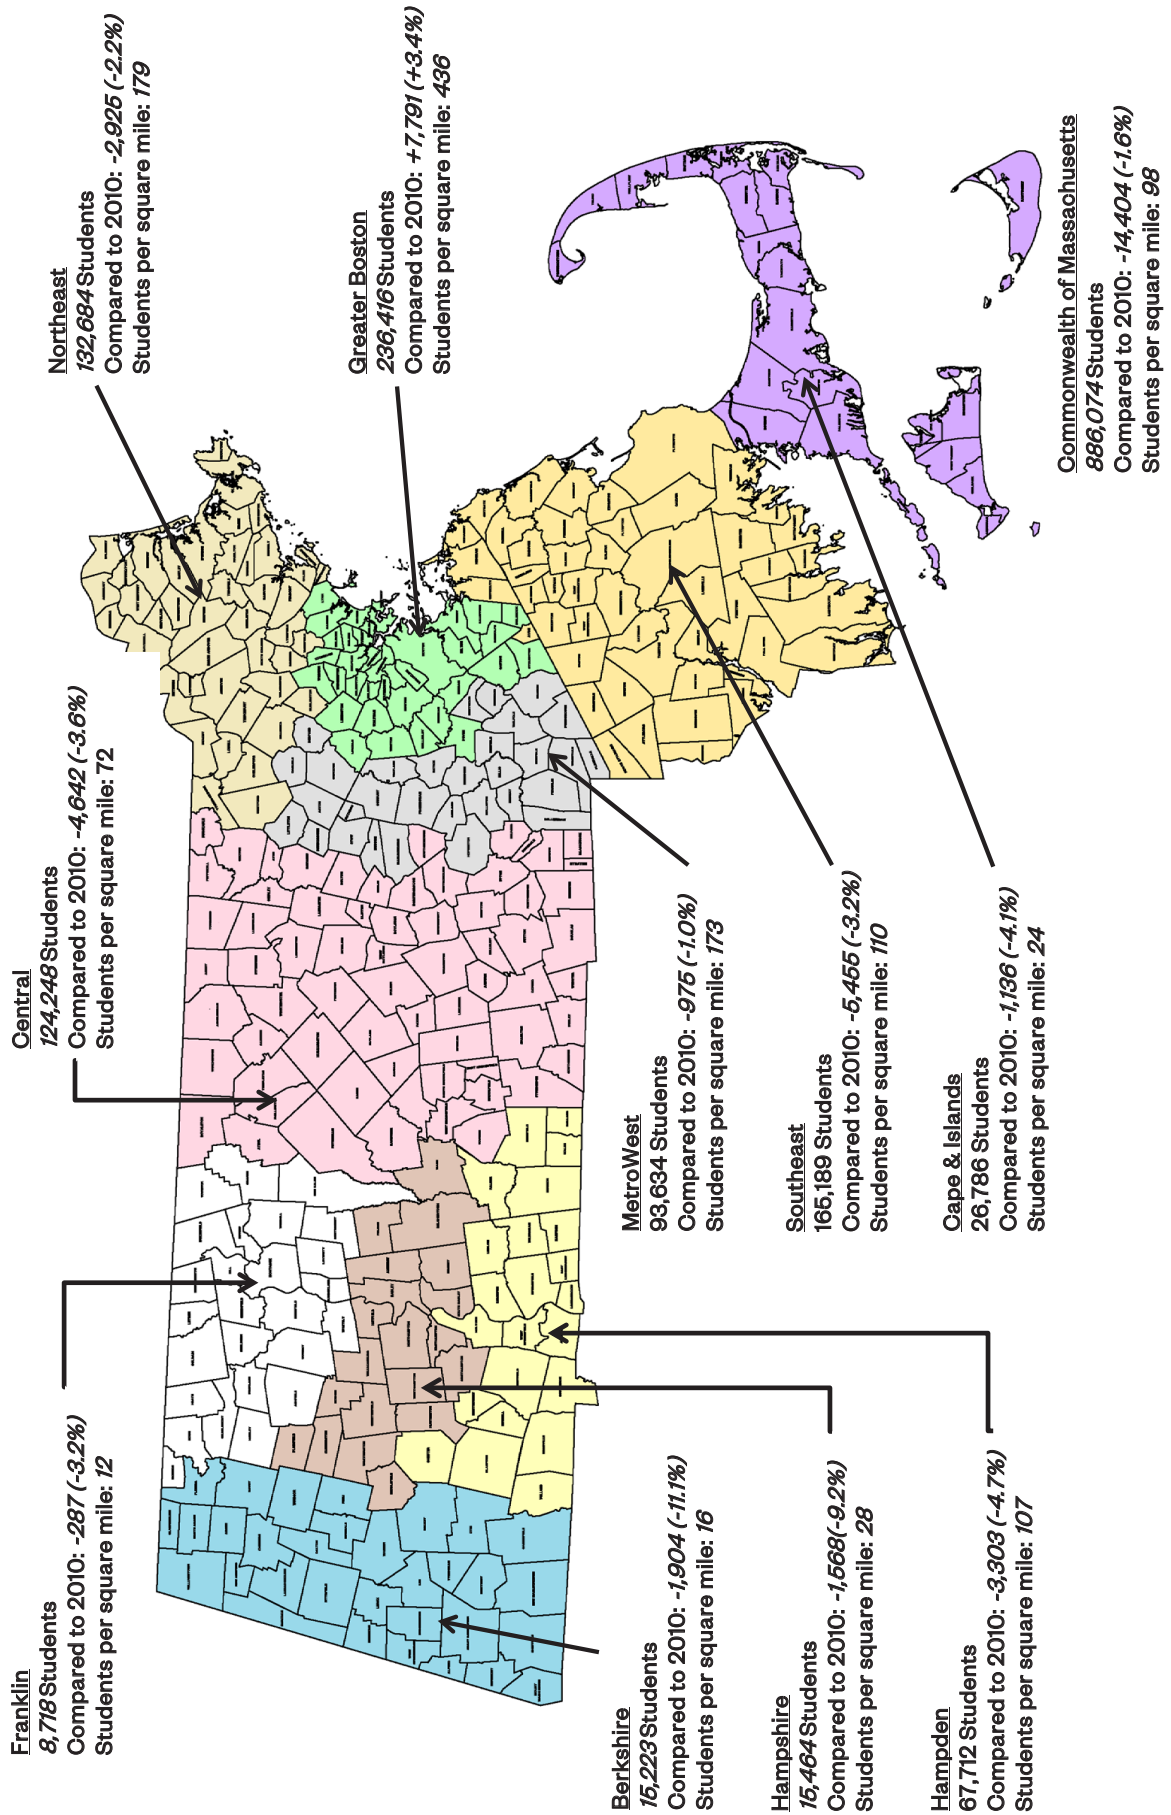

K-12 Public School Enrollment Changes

The MSBA is dedicated to working with districts that are experiencing declining and increasing enrollments alike to ensure that the learning environments for children across the Commonwealth are appropriate and right-sized.

⁽¹⁾ Analysis is based on public school students in kindergarten through grade 12 enrolled in traditional, regional, regional vocational, and agricultural schools and does not include pre-Kindergarten students or students enrolled in private schools, charter schools (except Horace Mann charter schools), educational collaboratives, or home-schooled students.

K-12 Public School Enrollment Changes Between 2010 and 2016
Based on DESE Public School Enrollment Data

The table below shows the twenty largest school districts in Massachusetts based on 2015-2016 non-charter public school enrollment in grades kindergarten through grade 12.

2016 RANK	2010 RANK	MUNICIPALITY	2009-2010 STUDENTS	2015-2016 STUDENTS	DIFFERENCE	PERCENT DIFFERENCE	LAND AREA (SQ. MILE)	STUDENTS PER SQ. MILE
1	1	Boston	52,949	50,636	-2,313	-4%	48.3	1,049

20	21	Lexington	6,114	6,849	+735	+12%	16.4	417

TECHNOLOGY

Although decisions about the technology component of a school's educational program remain local in nature, the MSBA works with school districts on approved projects to understand how they integrate technology into the curriculum and encourage flexible design to support the school's current and future educational program. The MSBA supports the state's technology standards and encourages districts to develop technology plans so that the MSBA can work more effectively with school districts on approved projects to achieve their technology goals and integrate the appropriate infrastructure into the proposed school design. The MSBA's grant program also includes a per student allowance of \$1,200 to offset the costs of technology equipment for approved major construction projects.

With the increase of technology use in schools over the past six years, the 2016 School Survey places emphasis on gathering a wide range of technology data. Data gathered by the survey team at the 1,419 visited schools includes:

- Number of students per device at each school
- Number of classrooms that have wired and wireless internet coverage
- Availability of wireless internet coverage in the library, cafeteria, gymnasium, and auditorium
- Number of classrooms that have installed or portable sound amplification systems
- Whether classrooms have sufficient power outlets to support the technology
- Whether the technology infrastructure affects the ability to conduct assessment testing

The surveys reported that most schools have outfitted most or all of their classrooms with either wired or wireless internet connections. At least 86.4% had the library or media center utilizing wireless technology. At least 77.6% had the gym wireless. At least 32.3% had the auditorium wireless. Approximately 70% of schools had sufficient devices and infrastructure to conduct statewide testing, and approximately 66.1% had sufficient power capacity to support the technology.

Information that the districts gathered and reported for 1,764 schools⁽¹⁾ includes:

- Internet upload and download speed at the school
- Whether the school is connected to a Wide Area Network that is capable of delivering 1 Gbps to the school
- Whether the school has a fiber connection
- Whether the school has a sufficient number of devices to be able to deliver online statewide assessments
- Whether the school's network currently has the capacity to deliver at least 100 kbps per student
- Whether the school's network has the capacity to deliver up to 1 Mbps per student
- Whether the school has access to sufficiently affordable broadband so that the district can purchase the bandwidth it needs to meet its capacity requirements

The results of the survey showed:

- 90.8% had fiber connection
- 95.9% had capacity to deliver 100 KPS per student
- 74.5% to deliver 1 Mbps per student
- 91% had download and upload speeds ranging from 1 Mbps to 1000 Mbps

DOWNLOAD MBPS REPORTED	NUMBER OF SCHOOLS	PERCENT
Less than 100	350	20%
100-500	808	46%
500-1000	440	25%
1000+	116	7%
No Response	35	2%

⁽¹⁾ Includes 1,419 visited schools; 276 projects in the grant program, underway or completed with the MSBA since 2007 and waitlist projects substantially complete after 2000 with very good building condition ratings from the 2010 survey; pre-Ks; schools in leased buildings and so called "schools within a school."

SECURITY

The 2016 survey gathered data similar to the 2010 survey but added information to provide a more thorough understanding of security systems utilized at the schools. In 2016, the categories for surveillance camera coverage were expanded from one overall system to three separate systems: interior coverage, exterior coverage and entrance coverage. Additional criteria added in 2016 included visibility of site approach from the administration suite, use of a credential or ID system, and the availability of two-way communications between classrooms and the main office or security. Locked entryways with buzzers and cameras are common features at the vast majority of schools in the Commonwealth. In addition, 75% have partial or full exterior camera coverage and 47% have partial or full interior camera coverage. In addition, eight out of every ten schools have intrusion alarms. Nearly 9.8% of schools, primarily larger middle schools, high schools, and vocational technical schools, have full-time security staff on site, while just over 3.1% use metal detectors. Every school has most, if not all, of their classrooms equipped with two-way communications.

CORE SPACES

Core spaces are those that the entire student body will use at some point of the day or week and, based on the type of school, are generally considered necessary to support the educational program of the school. These typically include libraries or media centers, gymnasiums, cafeterias, and for high schools, auditoriums. For the

1,419 schools assessed in 2016, over 88% of the schools include a library or media center, approximately 85% include a gymnasium, approximately 94% include a cafeteria, and approximately 7.5% of schools contain a multi-purpose room which may be utilized for one or more of the aforementioned uses. In addition, about 33% of schools contain an auditorium, providing a total of 241,739 seats.

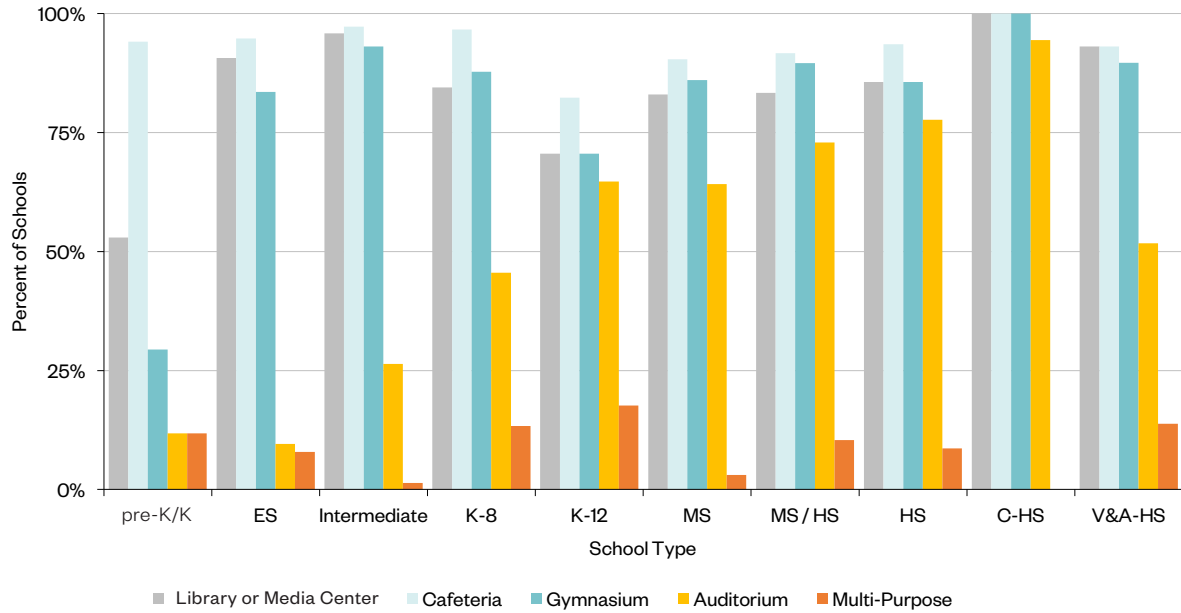

The table on the opposite page illustrates the percentage of school types with common spaces and auditoriums. There are several reasons why some schools may not maintain a library, cafeteria, or gymnasium. These include, but are not limited to:

- There are 96 schools that share buildings or common spaces. Two or more schools sharing the same campus may also share a library, cafeteria, or gymnasium.
- Of the schools that do not have a gymnasium, cafeteria, or library or media center, the vast majority have access to those facilities at an adjacent school or public facility. In urban districts, for example, it is not uncommon for students to use the public library or to have physical education at the local YMCA or community center.
- Some specialized programs may not require some core spaces. For example, an alternative program may not require a full library because library resources are available nearby in a different setting.
- A multi-purpose room may be utilized as the gymnasium, cafeteria, and/or auditorium.

Core Spaces in the Commonwealth by School Type (1,419 data set)

Percent of Schools with Access to Core Spaces by School Type (1,419 Data Set)

MAINTENANCE

A vital component of the MSBA's grant program is to protect the \$12.7 billion investment the Commonwealth has made for school construction projects over the last 13 years. Districts must demonstrate that they have met certain maintenance criteria based on industry best practices as a prerequisite to MSBA funding. The 2016 School Survey included a general evaluation of maintenance in three areas:

General Cleanliness: Assessors rated the school on cleanliness by observing hallways, classrooms, core areas, support spaces, and the site.

Routine Systems Maintenance: Assessors rated the school on routine maintenance by observing the conditions of the site and building systems for indications of routine attention and repair. Facilities staff also provided information about routine maintenance practices at the school. Routine maintenance includes repair and replacement of broken windows, plumbing fixtures, or stained ceiling tiles, as well as painting and other regular, ongoing maintenance practices.

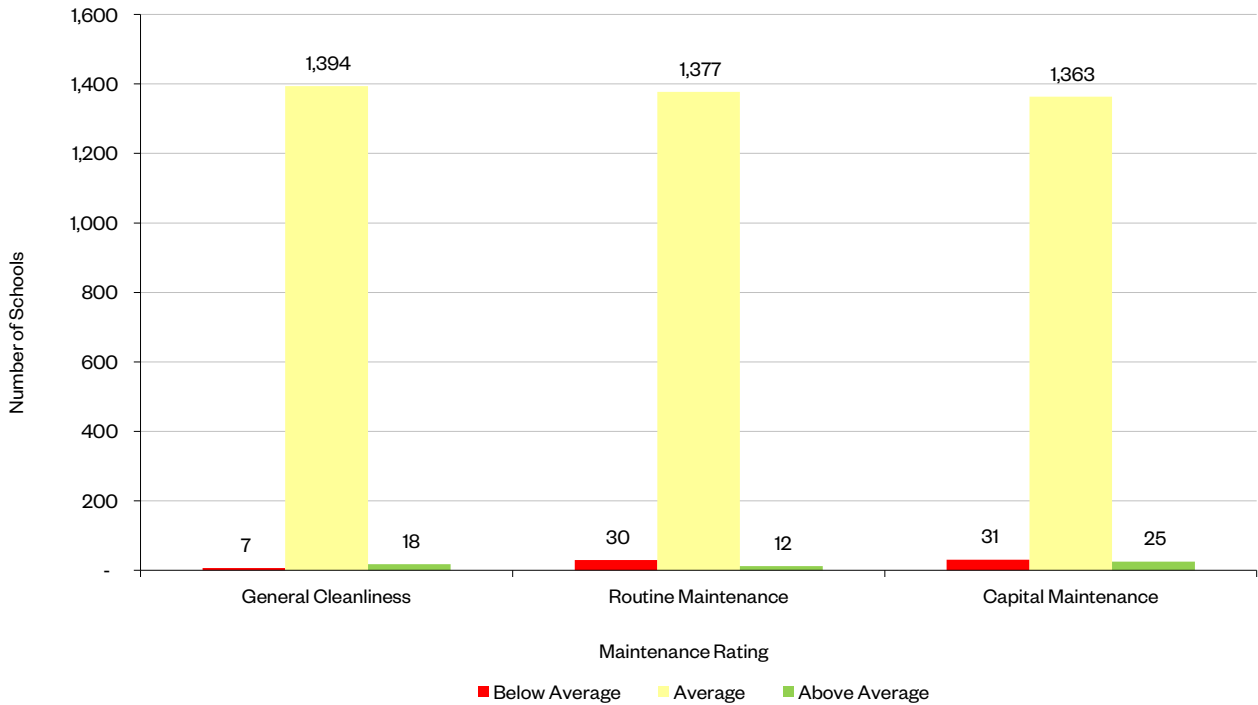

Capital Repair: Assessors rated the school on capital repair based on the age and condition of the systems and the history of capital repairs at the school to determine if equipment, systems, and finishes are being repaired or replaced as needed. Capital maintenance includes replacement or upgrades to major building or site

systems such as HVAC replacements, lighting upgrades, parking lot re-pavement, and abatement of flooring materials containing asbestos.

Maintenance in each category was rated as average, above average, or below average. The vast majority of school buildings in Massachusetts received an average rating, meaning that the school, district, and facilities personnel are putting forth the effort required to clean the buildings, maintain the systems and address capital repairs. Other findings include:

- 0.07% of schools had above average maintenance in all three categories compared to 3.6% in 2010.
- None of the schools were determined to have inadequate maintenance practices compared to 1% in 2010.
- Schools within the same district may have different maintenance practices and ratings.

Maintenance Ratings (1,419 Data Set)

DISTRICT SUMMARIES

There are 330 school districts in the Commonwealth that were assessed for this survey. The following is a description of each of the column headings appearing in the District Summaries:

District Name	Name of the school district
Enrollment	Official October 1st enrollment as reported by the Massachusetts Department of Elementary and Secondary Education for the 2016 – 2017 school year
Total GSF	Total square footage of all buildings in district
SF/Student	Total square footage divided by enrollment
Total Schools	Number of schools in the school district
Master Plan Developed	The year the district's master plan was developed; if a district does not have a Master Plan, "None" will be displayed.

MSBA 2016 School Survey Summary Findings (Sorted By District)

SCHOOL SUMMARIES

Listed here are the explanations of each table heading in the following School Summaries:

District Name	Name of the school district
School Name	Name of the school
Type	Grade configuration of the school
Year Founded	Year the building opened
2016/2017 Enrollment	Official October 1st enrollment as reported by the Massachusetts Department of Elementary and Secondary Education for the 2016 – 2017 school year
Square Footage	Total gross square footage of all buildings
SF/Student	Total square footage divided by enrollment
Classrooms	Number of instructional rooms within the building greater than 500 square feet.
Students/Classrooms	Total number of students divided by the total number of classrooms
Building Condition	A rating representing the general building condition of the school; the scale of this rating is from 1 to 4, with 1 being best.
Capacity Rating	A rating representing the general space utilization of the school; a school may be rated Under, Average, or Over utilization.
General Environment	A rating representing the general environment of the school; the scale of this rating is from 1 to 4, with 1 being best.
Other Abbreviations and Symbols	
*	Schools that have an asterisk were not surveyed. Information regarding square footage may require future update.
Int	Intermediate School

MSBA 2016 School Survey Summary Findings (Sorted By District and School)

* denotes schools in Grant Program not assessed in 2016

APPENDIX I

BUILDING CONDITION EVALUATION CRITERIA

2010/ 2016

BUILDING ANALYSIS

- Roofing
- Exterior Windows
- Boilers
- HVAC
- Structural Soundness
- Exterior Doors
- Exterior Walls
- Interior Floors
- Interior Walls
- Interior Ceilings
- Interior: Other (doors, hardware, etc.)
- Electrical Service and Distribution
- Electrical Lighting
- Plumbing
- Fire / Life Safety /Fire Suppression
- Specialties (casework, lockers, toilet partitions, etc.)

New in 2016 Assessment

- Elevators/Lifts

Not Assessed under Building Condition in 2016

- Technology (relocated to General Environment)
- Accessibility (relocated to General Environment)

SITE CONDITION ANALYSIS

- Parking Lot/Drives
- Walkways/Drop Areas
- Playgrounds/ Playfields
- Site Lighting
- Drainage

New in 2016 Assessment

- Septic/Sewage/Wastewater Disposal Systems
- Water Supply

Not Assessed in 2016

- Fencing
- Accessibility (relocated to General Environment)

APPENDIX II

GLOSSARY

of Schools – Number of schools in the school district.

Building – A structure, located on a school site or campus, in which public K-12 school children participate in educational programs. In general, most schools have one building. However, in certain limited circumstances, a school can have multiple buildings or conversely, one building can house multiple schools.

Building Condition Rating – A 1-4 rating representing the general conditions of 7 site and 18 building systems of the school.

Building System – Separate components with unique purposes that make up a building such as roofing, HVAC, windows, flooring, electric, lighting, etc.

Campus – A campus is a site where one or more schools is or are located.

Classrooms – Instructional rooms within the building greater than 500 square feet.

Comprehensive High School - A public high school that offers career and vocational-technical education programs, allowing students to learn career opportunities without the need to enroll in a full-time vocational program.

Core Project – A school building project for a municipally- or regionally-owned school facility that has submitted a Statement of Interest to the Authority and is in the process of completing phases of the MSBA's building process. Scope may include: New, Addition/ Renovation, or Major Repair.

Enrollment – The official number of students attending a school as reported by the district to the Department of Elementary and Secondary Education in October 2016.

Environment Rating – A 1-4 rating representing the general environment of the school.

Grant Program – Encompasses the MSBA's various programs with which the agency partners with school districts on building projects: Core, Accelerated Repair, Science Lab, Green.

Gross Square Feet (GSF) – Unit of measurement used to measure building area from the outside face of exterior walls.

MSBA – The Massachusetts School Building Authority.

Permanent Space – A building that is attached to a foundation and cannot be easily removed from a site.

School – A building or a series of buildings identified by the Massachusetts Department of Elementary and Secondary Education as public, K through 12 educational institutions that support educational programs based on the Massachusetts curriculum frameworks. Some small schools, including certain alternative education programs or early childhood centers that are located entirely within another school were not recorded as separate schools. Please refer to the host school for information.

School District – A general term applied to a legally constituted school entity which is recognized by the Board of Elementary and Secondary Education. A school district may include city, local, regional, charter, and vocational school districts.

Science Demonstration/Lab – A classroom space used for science specifically, and typically provides an area for teacher demonstration and/or contains sinks, utilities and counter space for individual or small groups of students to conduct experiments and projects.

Site – Location of a school, usually measured in acreage.

Space Utilization Rating – Under, Average, Over rating representing the space utilization of the school as compared to statewide norms.

Square Feet per Student or SF/Student – The square feet per student is calculated by dividing the total gross square footage of a building by the enrollment.

Students per Classroom – Total number of students divided by the total number of classrooms.

Temporary Classrooms – Instructional spaces housed in temporary (modular) buildings.

Temporary Space – A prefabricated building that is not attached to a foundation and can be removed from a site in the future.

Total GSF – Total gross square footage of all buildings in a district.

Type – School Type; a category based on the grade configuration of the school. For example, a High School generally serves grades nine through twelve.

2007, 2010, 2016 – Refers to calendar year survey took place.

APPENDIX III

CAPACITY INFORMATION

Capacity Utilization

Capacity Utilization is a calculation of the current 2016-17 Enrollment (or number of students officially enrolled at each school per DESE) divided into the school's Factored Capacity, expressed as a percentage. Average utilization ranges between 80 percent and 125 percent. Utilization below 80 percent and including and over 125 percent represents under and over utilization, respectively.

Factored Capacity

This study uses a functional capacity approach to define the Factored Capacity of a school as the number of students a facility can effectively serve given its educational program. It does not describe the physical maximum number of students that could fit into a school at a given time, which few school principals would view as a realistic model given the variation of student cohort sizes, class schedules, and course demand. Each school's Factored Capacity is calculated by adding up the sum total for all classrooms currently used for educational purposes, which is the product of three values: the Base Classroom Capacity Model times a Classroom Size Adjustment factor times a Utilization Factor:

- **Base Classroom Capacity Model** – A detailed inventory of all instructional spaces was compiled by each room's use, and capacity formulas consistent with the MSBA facility design standards for design enrollment calculations were applied to each. At the elementary school level, home rooms where students receive their standard daily instruction were assigned an unfactored capacity of 20 students, while pull-out spaces dedicated to special instruction such as gyms, computer labs, music, and art rooms were assigned 0 capacity. All secondary instructional spaces except unique pull-out resource rooms were figured into unfactored capacity calculations at 23 students due to rotating schedules. Special education rooms were used in capacity calculations but at a reduced student per room rate of 12.
- **Classroom Size Adjustments** – In order to make allowances for older facilities that were designed with small classrooms as compared to MSBA's current standards, reductive area adjustments were applied to schools where the average classroom

sizes measured less than 700 square feet. This study does not adjust the capacity of large classrooms upward, as it is assumed that these rooms will not necessarily be filled at maximum capacity every period of the school day.

- **Utilization Factors** – Utilization factors of 100 percent for elementary, and 85 percent for middle and high schools were applied to the sum total of area-adjusted classroom capacities to allow for grade cohort size variances, teacher conference periods, and the higher level of program diversity and variance of student demand for courses at the secondary grade levels.

Permanent and Temporary Capacity

Distinct counts of classrooms in permanent and modular buildings were recorded, providing insight into the extent to which each school relies on temporary and portable classrooms.

Recapturable Capacity

While the capacity of each room is based on its current field-verified use, the survey deliberately flagged classrooms used for non-instructional purposes such as administration, storage, and regional collaborative programs. This separate measurement of potential capacity helps inform long range facility planning efforts that considers all options, including the provision of suitable alternative facilities for these non-instructional operations.
